Module 1

Training Overview & Introductions

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 1 Topics

- Agenda
- Logistics
- Rules of Engagement
- Course Goals
- Learner Objectives
- Introductions

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Training Agenda

- **Module 1:** Introductions
- **Module 2:** Method Overview & This Appraisal
- **Module 3:** The Appraisal Team
- **Module 4:** Artifact Review
- **Module 5:** Affirmation Review Activities

- **Module 6:** Recording & Validating Findings
- **Module 7:** Characterization
- **Module 8:** Preliminary Findings
- **Module 9:** Rating
- **Module 10:** Performance Report
- **Module 11:** Reporting Results & Wrap-Up

Logistics

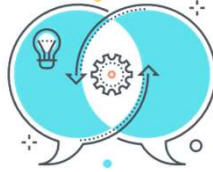

Course Symbols

Activity

Uses worksheets located in the Appraisal Team Member Preparation Guide.

Class Discussion

Denotes a directed full-class or small group discussion.

Required Training

Contains a required ATM appraisal training topic.

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Rules of Engagement

-  Participate and share your experience
-  Use the chat feature and reactions to support and encourage communication
-  One conversation at a time please
-  Keep discussions and questions on topic
-  Use the parking lot for issues
-  Do not continue to revisit posted issues

Change Requests

Submit change requests for model and training issues at:

support.isaca.org

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Training Goals

By the end of this training, you will be able to:

- Explain the roles and responsibilities of an Appraisal Team Member (ATM)
- Describe the context of this appraisal
- Explain how to perform artifact review and affirmation collection activities
- Explain characterization and rating activities

NEXT: We'll talk in a few minutes about any other goals or expectations you may want to cover.

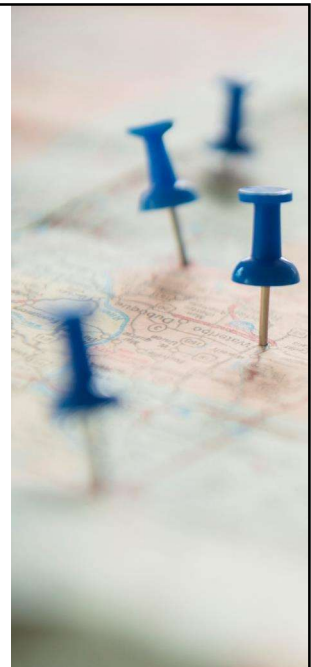

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Explain the Roles and Responsibilities of an Appraisal Team Member (ATM)

Learner Objectives

1. Describe the qualifications for being an ATM and how you met them.
2. Describe the purpose of the appraisal plan and its content.
3. Describe the different roles and team norms on an appraisal team, including what they do and why they are important.
4. Describe in your own words the function of a mini-team.

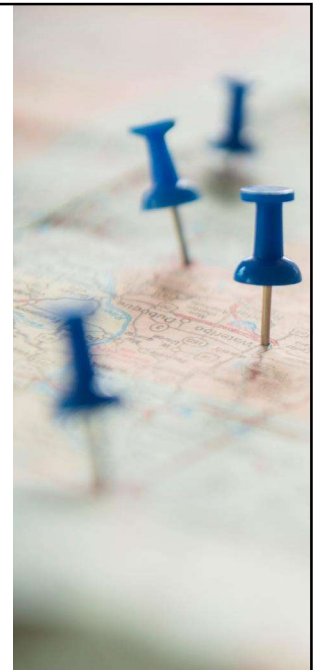

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Describe the Context of this Appraisal

Learner Objectives

5. Describe the objectives for this appraisal.
6. Describe why confidentiality and non-attribution are critical in the appraisal method (MDD).
7. Describe the minimum required readiness review criteria and risks, conflicts of interest, and expected outcomes for this appraisal.
8. Describe how any tools are being used by the appraisal team to assist and perform this appraisal.
9. Describe how virtual activities, conditions and requirements are addressed in the appraisal plan, and executed in the appraisal.

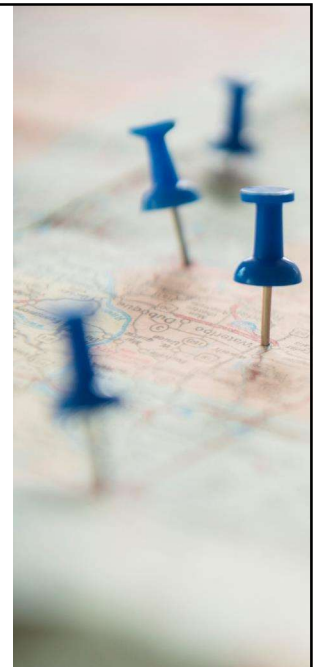

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Explain How to Perform Artifact Review and Affirmation Collection Activities

Learner Objectives

10. Describe the purpose and method for artifact review.
11. Describe the process for recording observations related to artifacts.
12. Describe how artifact reviews for organizational functions and in scope projects are performed for the OU.
13. Describe the purpose and method for collecting affirmations.
14. Describe the process for recording notes during affirmation sessions and tagging them to model practices.
15. Describe how the appraisal team uses affirmations.

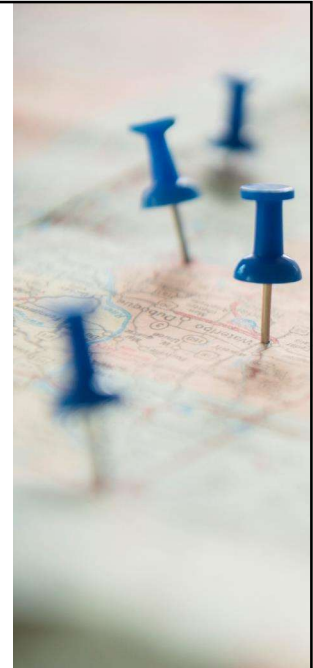

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Explain Characterization and Rating

Learner Objectives

16. Describe full team and mini-team consensus and when they apply.
17. Describe the process for writing and validating findings and delivering appraisal results.
18. Describe how the rules of characterizations and ratings are determined and assigned.
19. Describe the process for developing the reporting results, including the Performance Report.

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Participant Expectations

Group Discussion

Answer the following questions:

1. What do you expect to get out of this training?
2. What questions do you have coming into this appraisal?

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Activity 1: Meet the Team

Appraisal Team Member Preparation Guide

Individually

1. Navigate to the **Personal Introduction Interview Form**
2. Briefly review each section
3. Consider open-ended questions you can use to gather responses

In Pairs

1. Interview another team member
2. Record the responses
3. Prepare to introduce your partner to the rest of the team

Class Discussion: Meet the Team

1

Name and
professional
background

2

A little personal
information...

3

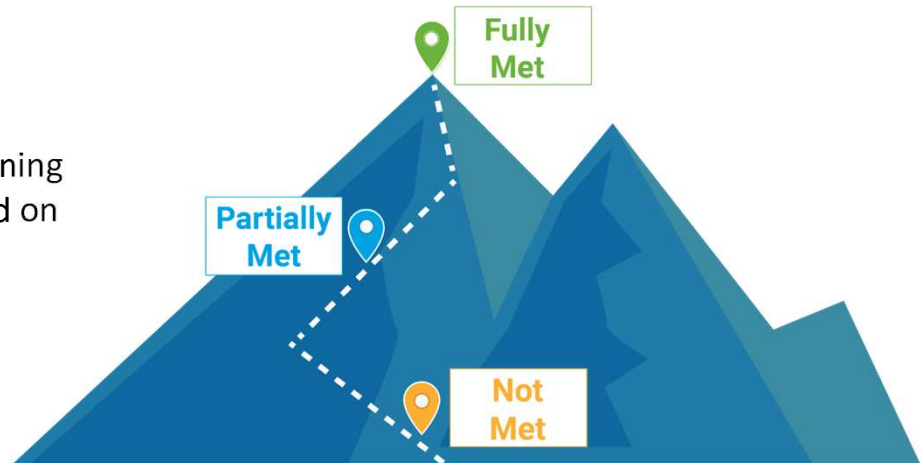

Something no one
knows about
them...

Assess Your Progress

Learner Objective(s): N/A

This slide is used at the end of each module to review and verify that Learner Objectives have been met.

Note how your learning is progressing based on Learner Objectives addressed so far

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 2

Method Overview & This Appraisal

Learner Objectives: 2, 3, 5, 6, 7, 8, 9

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 2 Topics

- CMMI appraisal process overview
- Terms with special meanings
- Appraisal plan and schedule
- Appraisal tool
- Confidentiality and non-attribution agreement

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Appraisal Method Definition Document (MDD)

The ATL is obligated to use their copy of the MDD with their appraisal teams to accurately interpret and explain MDD activities and requirements, including MDD use when providing this ATM training.

The MDD:

- Provides complete descriptions of appraisal requirements, process definitions, related activities, and implementation guidance
- Helps standardize how to conduct appraisals in combination with training materials and work aids that comprise the CMMI product ecosystem

ATLs are expected to:

- Read, understand, be trained in, be certified in, and fully comply with the MDD
- Apply the MDD effectively and consistently with their appraisal teams

Any statement in the MDD that uses the terms “must” or “shall” is required.

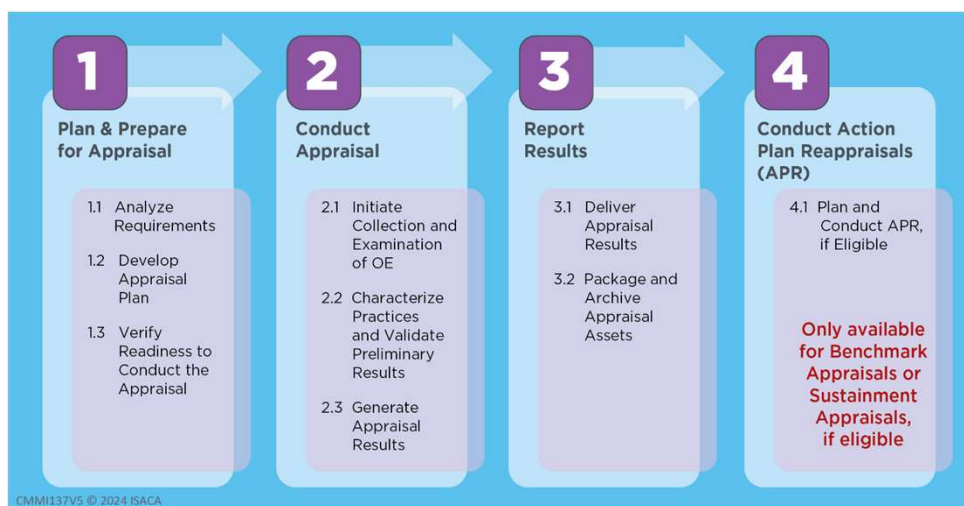

If there are any conflicts between training materials, work aids, and the MDD-described appraisal method, the MDD is the authoritative source of appraisal requirements, implementation guidance, and interpretation.

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Terms with Special Meaning

- Meet the intent and value
- Objective Evidence (OE)
- Artifacts
- Affirmations
- Organizational Unit (OU)
- Process role
- Sampling factor
- Subgroup
- Sample Eligible
- Sample Ineligible
- Randomly Generated Sample (RGS)
- Sampled projects and Organizational Support Functions (OSFs)

CMMI Appraisal Process: Appraisal Flow by Phase

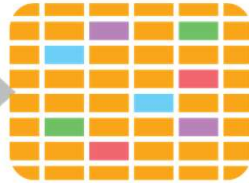

Phase 1: Plan & Prepare for Appraisal

1.1 Analyze Requirements

1.2 Develop Appraisal Plan

1.3 Verify readiness to Conduct the Appraisal

CMMI159V2

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Readiness Review Criteria

This is used to determine whether the appraisal team and appraised organization are ready to conduct the appraisal as planned within the time allocated.

Readiness Review

OE readiness

Appraisal team readiness

Logistics readiness

Appraisal risk status

Overall appraisal feasibility

CMMI171V1 © 2021 ISACA

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Phase 2: Conduct Appraisal

2.1 Initiate
Collection and
Examination of OE

CMMI160V2

2.2 Characterize
Practices and Validate
Preliminary Results

2.3 Generate
Appraisal Results

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Phase 3: Report Results

3.1 Deliver Appraisal
Results

CMMI161V1

3.2 Package and
Archive Appraisal Assets

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Phase 4: Conduct Action Plan Reappraisal (APR) (1 of 2)

4.1 Plan and Conduct APR, if eligible

- Option to address potential weaknesses if Benchmark or Sustainment Appraisal resulted in not meeting targeted maturity level (ML) or capability level (CL) profile targets
- Intent is to allow for situations where the target ML or CL is not achieved, but only by a narrow margin
- Requires meeting specific eligibility rules prior to discussing as an option with Appraisal Sponsor and approval from ISACA
- Must not be planned or discussed until Phase 4 criteria has been verified as met and approved

Phase 4: Conduct Action Plan Reappraisal (APR) (2 of 2)

APR Rules

- Same ATMs from Benchmark or Sustainment Appraisal
- Entire team must participate in consensus activities
- Model scope is a subset of Benchmark or Sustainment Appraisal
- Practice Areas with weaknesses, plus Implementation Infrastructure (II) and Governance (GOV) must be re-evaluated
- If any characterizations are changed, ratings must be re-evaluated

Appraisal Plan Recap

- Goals and objectives for the appraisal
- Resources, e.g., appraisal team, organization participation, equipment, facilities
- Readiness Review approach, including criteria
- Confidentiality and non-attribution
- How the appraisal method has been tailored for this appraisal
- Appraisal scope (Model, OU, sampling, etc.)
- Activities to be performed
- ATM roles
- Cost and schedule estimates
- Logistical considerations
- Risks and mitigations
- Conflicts of Interest (COI)
- Appraisal Schedule
- Any other items that could impact the appraisal objectives, plan, or schedule

Developed by the ATL and approved by the Appraisal Sponsor

Defines and records the context, activities, risk, etc. for effectively conducting an appraisal

Virtual Conditions and Requirements

The ATL reviews virtual conditions, criteria, and requirements, including:

- When video cameras are required during virtual appraisal interview/affirmation sessions, including interviews and demonstrations, and follow-up interviews.
- May include Opening Briefing, Preliminary or Draft Findings and Final Findings Events
- When appraisal team co-location or virtual Face-to-Face (F2F) is required
- Establishment and communication of a code of conduct for all virtual appraisal activities, including appraisal team interactions, and interaction, interviews, and demonstrations with OU personnel
- Any other virtual considerations and how the appraisal team addresses them throughout all phases of the appraisal

All members of the appraisal team must be aware of and address virtual aspects in scope.

Appraisal planning uses best practices and lessons learned from the Enabling Virtual Work Practice Area and is addressed throughout the MDD.

Appraisal Plan and Schedule Review

Group Discussion

As a Group

- Review the appraisal plan and schedule
- Note the Readiness Review approach and criteria
- Note the CMMI domains in scope, and target capability or maturity levels

Confidentiality and Non-Attribution Agreement

As a Group

1. Review the confidentiality and non-attribution agreement
2. Ask any questions you may have

Individually

1. Sign your copy of the agreement, if you haven't already
2. Provide signed agreement to ATL

Appraisal Tool

As a Group

1. Review the tool used during the appraisal
2. Note any rules for using tool

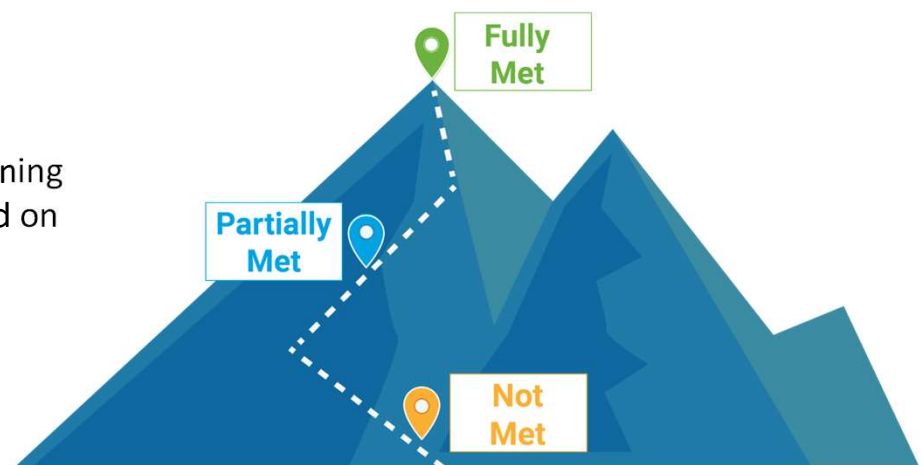

Individually

1. Ensure you can access tool
2. Download a copy for your own use
3. Note any questions you have

Assess Your Progress

Learner Objective(s): 2, 3, 5, 6, 7, 8, 9

Note how your learning is progressing based on Learner Objectives addressed so far

Module 3

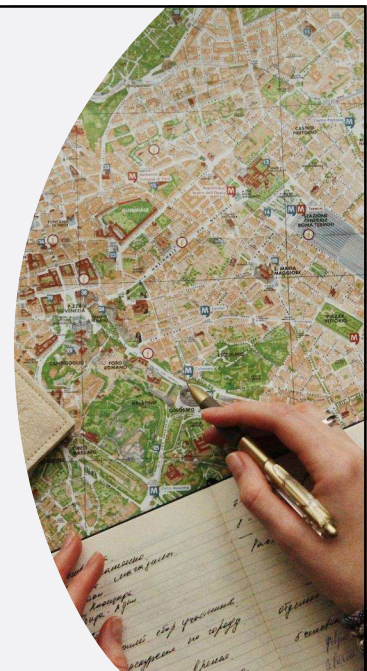

The Appraisal Team

Learner Objectives: 1, 2, 3, 4, 9

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 3 Topics

- Lay a foundation for working effectively as an appraisal team
- Establish the key attributes and conditions for an effective appraisal team
- Describe the roles on the appraisal team and how mini-teams are used on an appraisal
- Outline a model for decision making

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Your Experience with Teams

Discussion

Individually

1. Think about your previous experiences being part of a team (personal, academic or professional)
2. Without discussion, write down at least one positive and negative experience
3. Note the characteristics of the positive and negative experiences

As a Group

1. Discuss your experiences
2. How are they similar or different?
3. What do the positive and negative characteristics have in common?
4. How does that influence you as an ATM on this Appraisal?

When is a Group a Team?

Groups that call themselves teams usually have:

- A reason or purpose for working together
- A need for each other's experience, ability, and commitment to obtain a mutually held goal
- A belief that working cooperatively will lead to more effective output than working alone
- Accountability within the larger organization

What is an Appraisal Team?

A group of experienced individuals that must come together quickly and perform at a high level when conducting a process appraisal of an OU.

May include members internal and external to the organization

Typically consists of 4 to 9 members, including the ATL

May contain mini-teams within the appraisal team

Why Have Appraisal Teams?

- **Quality** appraisal results reflect the knowledge, experience, and skill of the appraisal team.
- **Objectivity** of the appraisal results is dependent on the objectivity of the appraisal team
- **Credibility** of the results is dependent on the credibility of the appraisal team and its decision-making process

Critical Ingredients for a Team

Clear approach
and goals

Appropriate
membership

Clearly
defined roles

Team norms (shared
beliefs and values)

Sufficient time
and resources

Consensus-based
decision making

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Clear Approach and Goals

Critical Ingredients for a Team

An appraisal team cannot reach its goals efficiently or effectively if the goals are ambiguous or missing. For a typical appraisal team, **the key goals are to:**

Follow the CMMI appraisal
process, with full fidelity,
as tailored and recorded in
the appraisal plan

Provide appraisal results
that are clear and accurate,
delivering value to the
Appraisal Sponsor

Complete all appraisal
activities as scheduled,
without excessive stress
on the team

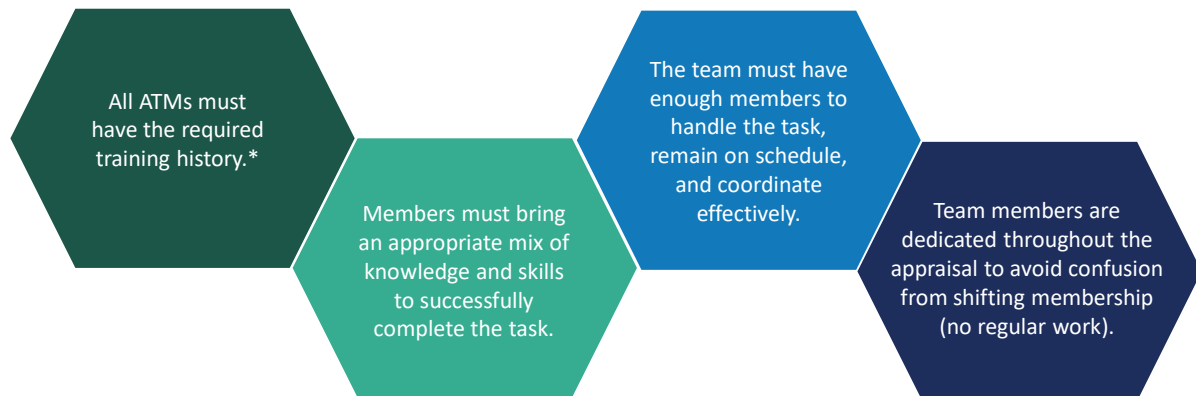

The appraisal plan records the overall goals of this appraisal.

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Appropriate Membership

Critical Ingredients for a Team

Team members are selected based on criteria already provided to the organization:

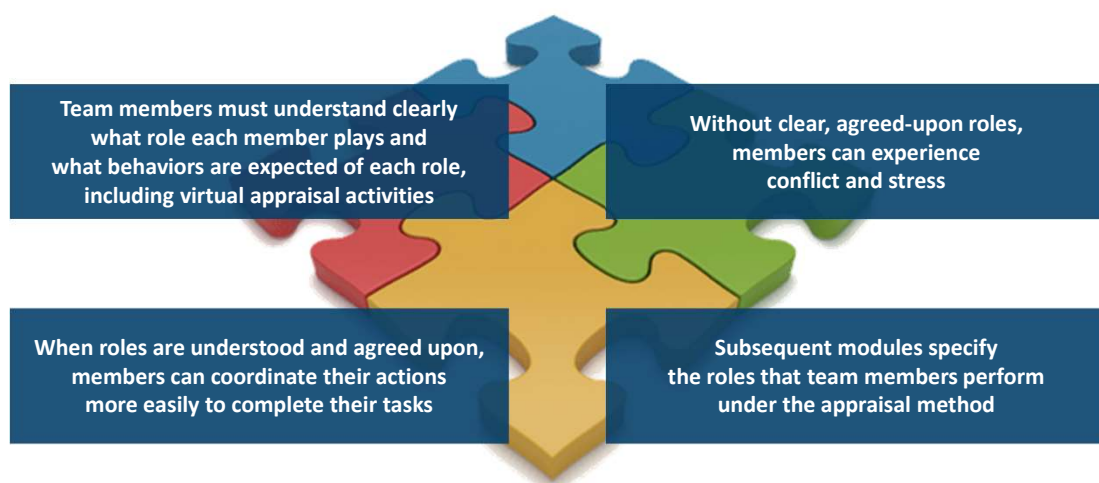

* For additional information, refer to <https://cmminstitute.com/partners/policies>

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Clearly Defined Roles

Critical Ingredients for a Team

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Sufficient Time and Resources

Critical Ingredients for a Team

Teams need enough time to complete the work and the resources to support them.

Two Kinds of Time

- **Performance Time:** when the team prepares to produce and then works to produce its results
- **Process Time:** when the team reflects on how it can improve performance by systematically learning from experience to improve overall effectiveness

Appropriate Resources

Items that need to be provided to ensure team efficiency and effectiveness, e.g., spreadsheets, Internet, or intranet access

The ATL Role

Part of the ATL role is to monitor the team's use of time and resources, and ensure adequate performance and process time

Team Norms – Our Shared Values and Beliefs

Critical Ingredients for a Team

In a team with a strong culture, members take actions and make decisions that are consistent with shared **values** and **beliefs**.

Team culture is the set of **beliefs** and **values** that members share and that guide their behavior.

Beliefs

Assumptions about what is true, e.g., “people are naturally motivated to do a good job”

Values

Assumptions about what is worthwhile or desirable, e.g., “practicing what one preaches”

Activity 2: Norms For This Team

As a Group

1. Consider what norms are needed for this team to operate with trust, integrity, productivity, and accuracy
2. Develop a list of rules of conduct we all buy into (e.g., schedule, breaks, participation, attendance)
3. Are these explicit enough?
4. What other norms do we need to operate?

No “unwritten” team norms!

- It is difficult to enforce unspoken norms when members violate them

Examples of basic norms for this team:

- Decisions on characterizations, findings, and ratings are made by CONSENSUS
- One person speaking at a time
- No hidden agendas
- All participants contribute
- No single participant can monopolize the floor
- Attacking comments is not allowed
- All participants are present and on time for all appraisal activities
- We listen carefully before we react
- How we handle virtual/remote issues as a team
- Process checks can be called for at any time

What is a Mini-Team?

Used at the discretion of the ATL, to break work into smaller segments that can be performed in parallel

Comprised of a subset of the ATMs who are assigned primary responsibility for collecting sufficient appraisal data and OE to ensure coverage of an assigned set of model Practice Areas (PAs) for an assigned sampled project(s) or Organizational Support Function (OSF)

Reach consensus on project-level characterizations

Record preliminary findings at the project level

Propose OU-level findings

May perform other tasks at the discretion of the ATL, including supporting any needs related to virtual considerations

Understanding Consensus

Critical Ingredients for a Team

All important team decisions are made by consensus

Consensus is finding a proposal acceptable enough that:

- All team members can support it
- No team member opposes it

Consensus IS:

- Attempts to produce a win/win solution for all team members
- Retains team integrity and mission focus

Consensus is NOT:

- A unanimous vote: it may not reflect everyone's first priorities
- A majority vote: even the minority must be content with the proposal
- Ensuring all team members are fully satisfied with the outcome

Understanding Consensus

Tests for Consensus

Consensus decision making maintains **team integrity** and **cohesion** throughout a CMMI Appraisal.

Every team member must vote, and even one thumb down means the decision is not accepted.

Consensus has been achieved when:

- Everyone feels their views have been heard by the team
- Everyone can live with the proposed decision

Thumb voting technique: thumb up, sideways, and down

Yes, the decision is what I would choose on my own.

The decision would not be my first choice, but I can live with it, and I will support it.

No, I cannot live with it or support it.

Building Appraisal Team Consensus

Type of Consensus	
Maturity Level or Capability Level Profile Ratings	FULL TEAM
Practice Group and Practice Area Ratings	FULL TEAM
Practice Characterizations (Organizational Unit Level)	FULL TEAM
Practice Characterizations (Project and OSF Level)	MINI-TEAM or Individual ATM

Mini-teams are used at the discretion of the ATL

CMMI112V5 © 2024 ISACA

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Appraisal Team Consensus – Example Guidelines

Agreement

1. Based on objective evidence – artifacts and affirmations
2. Interpreted required model component correctly
3. Applied required model content within the OU appropriately
4. Verify appraisal method has been applied correctly
5. Verify consistency with other findings
6. There is clear understanding

Disagreement

1. Missing / incomplete / inconsistent evidence
2. Misinterpreted required model component
3. Misapplied required model content within the OU
4. Appraisal method has not been followed correctly
5. Inconsistency with other findings
6. There is misunderstanding

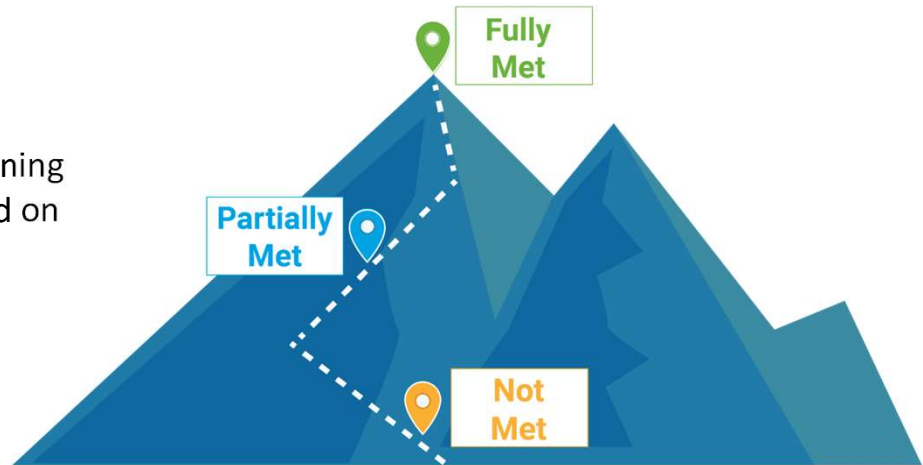

Contributed by Pascal Rabbath, Benchmarked™

Assess Your Progress

Learner Objective(s): 1, 2, 3, 4, 9

Note how your learning is progressing based on Learner Objectives addressed so far

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 4

Artifact Review Activities

Learner Objectives: 5, 10, 11, 12

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 4 Topics

- Opening Briefing
- Schedule Review
- Objective Evidence
- Artifact Review

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Opening Briefing

The CMMI appraisal method requires that communication with the appraisal participants takes place to establish expectations and answer questions about the appraisal.

Includes communications, formal presentations, and direct interactions one-on-one with the individual appraisal participants

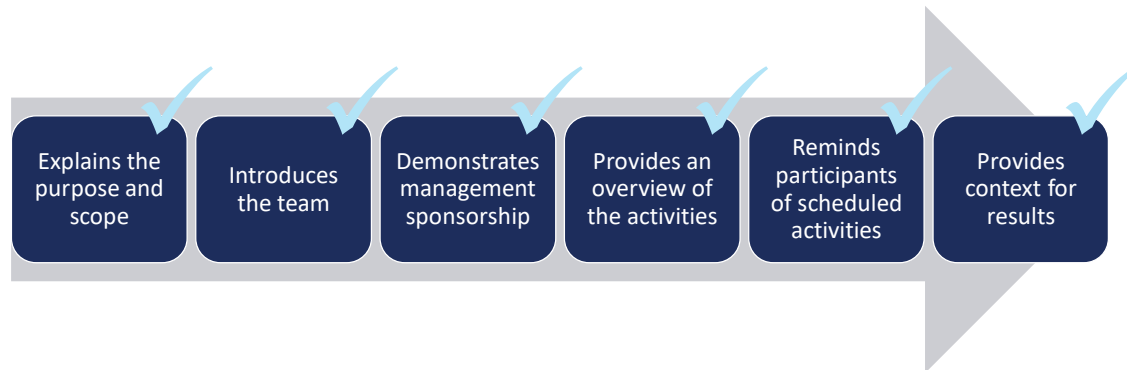

Provides the best forum for communication with the entire set of participants

Allows use virtual technology during the Opening Briefing with details of attendees and locations recorded in the appraisal plan

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Opening Briefing Goals

Establish a common set of expectations for the appraisal that:

Opening Briefing Attendance

Full appraisal team

- A group of individuals led by an Appraisal Team Leader (ATL)

Appraisal Sponsor

- The individual who requires the appraisal to be performed

Appraisal participants

- People with process roles in the sampled projects and organizational support functions

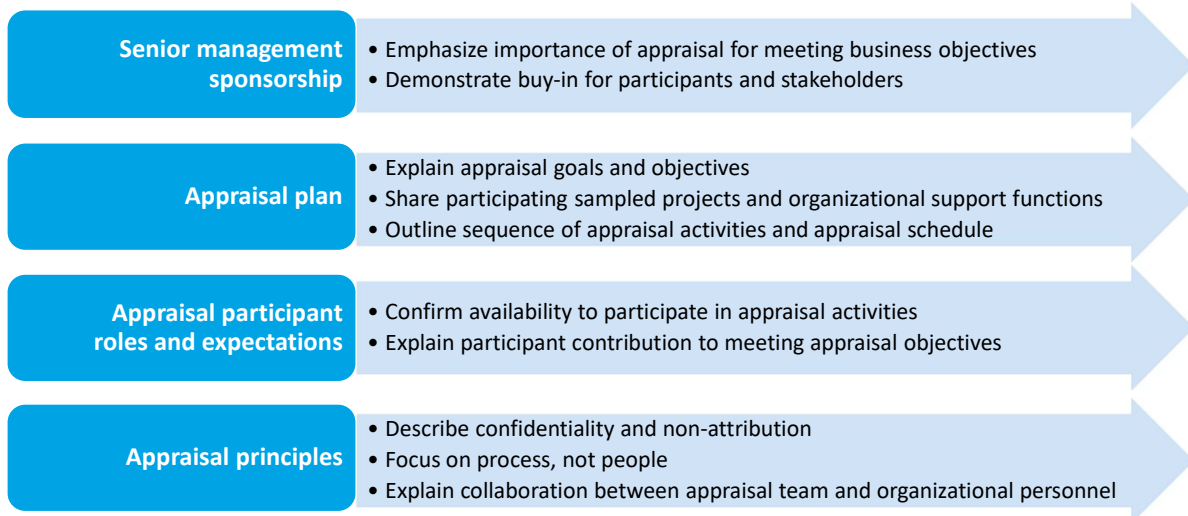

Other organization members

- When deemed appropriate by Appraisal Sponsor and team

Interpreter

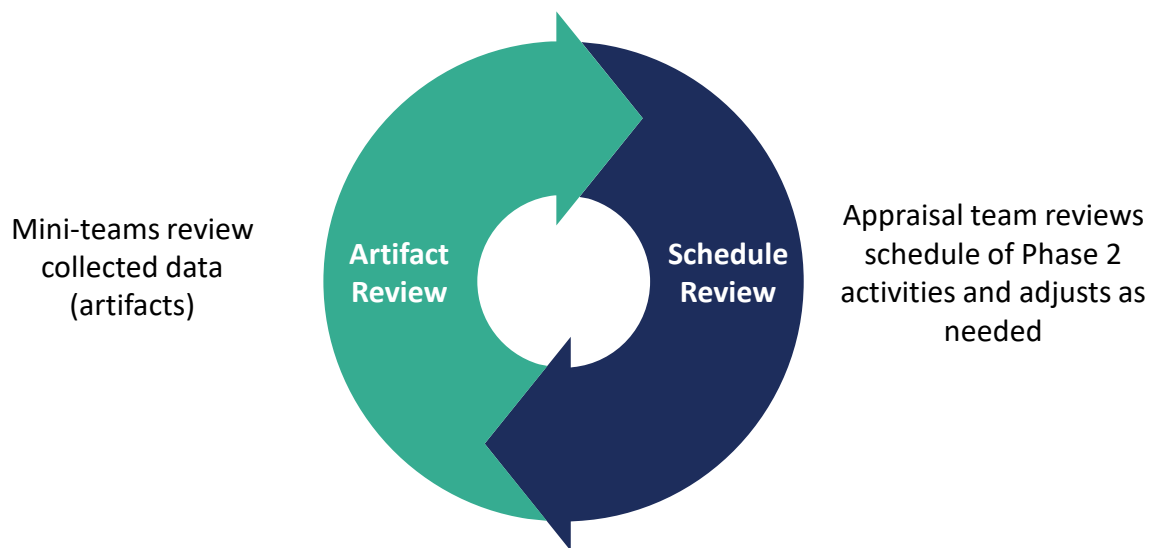

- Registered or not, if applicable

Opening Briefing Topics

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Activities

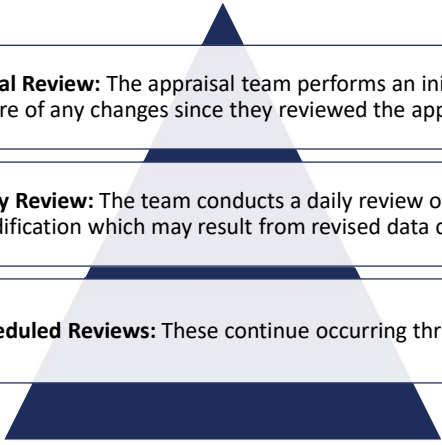

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Schedule Review

Measuring Team Progress

Appraisal team and mini-teams regularly monitor and focus the pace of their activities.

Initial Review: The appraisal team performs an initial review to ensure they are aware of any changes since they reviewed the appraisal plan

Daily Review: The team conducts a daily review of the schedule to adjust for any modification which may result from revised data collection approach

Scheduled Reviews: These continue occurring throughout the appraisal

Overview: Objective Evidence (OE)

Artifact: A form of objective evidence that is an output of the work being performed and process being followed.

- Must demonstrate the extent of implementing, performing, or supporting the organizational or project processes that can be mapped to one or more model practices.
- Must be provided by people who have a process role to implement, perform, follow, or support processes.
- Refer to “document,” “process role,” and “appraisal participant.”

Affirmation: A written or oral statement confirming implementation, or lack of implementation, of processes that meet the intent and value of one or more model practices.

- Must be provided by people who have a process role to implement, follow, or support processes
- Must be provided in an interactive forum where the appraisal team has control over the interaction

Artifact Examples

Artifact Review Purposes

OE review is performed many times during the appraisal to:

Become familiar with processes used in the organization	Prepare for scripting interview questions	Review data and determine if it is acceptable as OE
• Build context around how processes are performed and followed by the OU • Inform results building activities and tasks performed later in the appraisal	• Corroborate artifact use by OU • Identify additional relevant artifacts for review • Investigate potential gaps in documentation that could become weaknesses against the model	• Determine the corresponding reference model practices • Determine what portions of the OU correspond to the data • Verify habit and persistence of processes

Planning for Artifact Review

How the appraisal team plans for artifact review can vary based on the OE collection method selected for the appraisal.

Verification

Organization often catalog OE and provide mapping to corresponding reference model practice(s).

Includes documents from the:

- Organizational level
- Project level
- Organizational support function level, e.g., QA, Process Group

OE database may be web-based, in paper files, or a combination

Discovery

Organization provides limited OE prior to appraisal.

Appraisal team probes and finds a majority of OE during onsite period to obtain sufficient coverage of model components.

Appraisal plan includes:

- Time
- Resources
- Source identification

Managed Discovery

OU compiles an artifact repository for the appraisal team using phased evidence collection approach.

The appraisal team:

- May request additional documents during the appraisal
- Is responsible for maintaining the document catalog used for OE
- Captures information in the Appraisal Tool worksheet
- Provides worksheet as part of Appraisal Results Package

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Artifact Review Tasks Preparation

The team performs initial and ongoing reviews of information throughout the appraisal.

Initial Review

Appraisal team verifies initial artifact inventory

Organization provides team with an inventory overview and reviews library management procedures, such as:

- Requesting artifacts
- Handling artifacts, e.g., no markings, security, information assurance, etc.
- Disposing of artifacts

Ongoing Review

Prior to each activity, appraisal team members or mini-teams identify information still needed by reviewing:

- Database of OE
- Appraisal team worksheets identifying gaps and information needed
- Appraisal team notes
- Appraisal scope

ATMs assign/select artifacts for review based on results of ongoing review

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Artifact Review Strategies

Follow a “thread” of connected data, e.g.,

- Following the phases or activities in a lifecycle
- Investigating all resulting actions from an incident
- Relationships between artifacts, e.g., project scope to project estimates to project plan and schedule

Use appraisal team expertise in subject areas:

- Product or services development
- Safety and security
- Configuration Management

Ask site personnel for help:

- Be aware of terminology differences
- Look for specific information
- Consult internal ATMs, if necessary

Artifact Review Tasks Each Review Session

- **Manage artifact inventory**
- **Vary strategies**
- **Take notes**
 - Immediately tag pertinent or critical information
 - Summarize and reference; do not repeat
 - Identify follow-up details needed
- **Record follow-up actions**
 - Requests for information (RFI)
 - Affirmation session questions
- **Complete appraisal team worksheets** and capture reviewed artifact(s) information
 - Database of OE
 - Gap statements
 - Other information needed

Artifact Review Considerations

Challenges

- Consuming a great deal of time
- Trying to read everything to discover useful information
- Losing focus on the intended objectives

ATM Expectations

- Know what to look for and when to stop looking
- Look for process implementation that meets the intent and value of the CMMI practice
- Follow the threads of the process to locate stated inputs or outputs

Activity 3: Recognizing Artifacts

Appraisal Team Member Preparation Guide

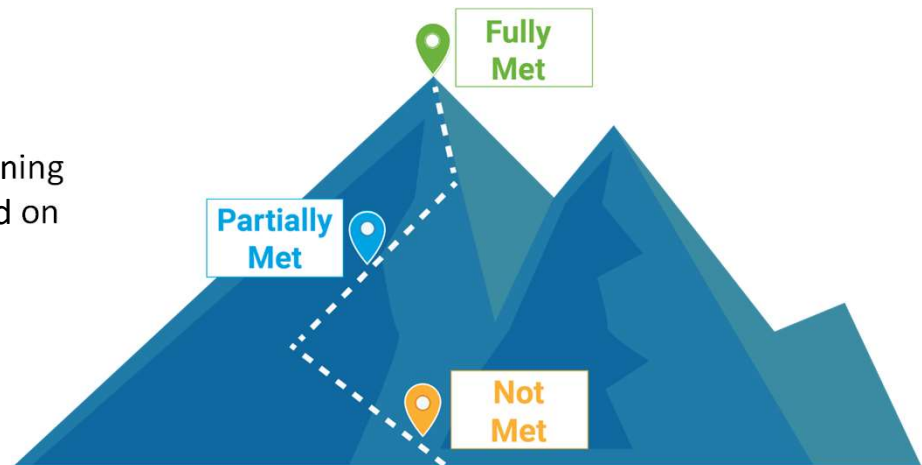

In Small Groups:

1. Study the lists provided, using your copy of the model to read the full CMMI practice intent and value statements and any additional required information
 - As a group, determine what artifacts in List B best reflect an artifact for the practice in List A
 - Note that it is possible to have one artifact meet one or more practice and some practices may have more than one answer
 - Some artifacts may require additional 'clarifiers or qualifiers' to create a best fit; if your group identifies any, write them down and be ready to present and discuss
 - Demonstrate the "go back to the process, OE and model approach"
2. Select a spokesperson to present and discuss your group's results
3. Debrief exercise with the entire team

Assess Your Progress

Learner Objective(s): 5, 10, 11, 12

Note how your learning is progressing based on Learner Objectives addressed so far

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 5

Affirmation Review Activities

Learner Objectives: 13, 14, 15

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 5 Topics

- Affirmation rules
- Conducting interviews

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Objective Evidence (OE)

Artifact: A form of objective evidence that is an output of the work being performed and process being followed.

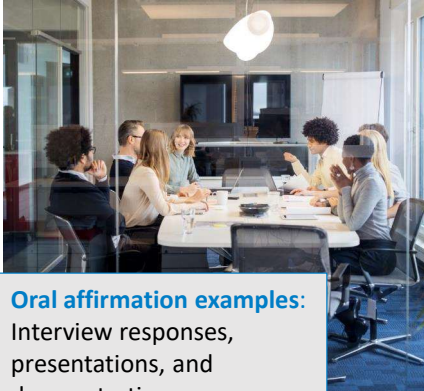

- Must demonstrate the extent of implementing, performing, or supporting the organizational or project processes that can be mapped to one or more model practices.
- Must be provided by people who have a process role to implement, perform, follow, or support processes.
- Refer to “document,” “process role,” and “appraisal participant.”

Affirmation: A written or oral statement confirming implementation, or lack of implementation, of processes that meet the intent and value of one or more model practices.

- Must be provided by people who have a process role to implement, follow, or support processes
- Must be provided in an interactive forum where the appraisal team has control over the interaction

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Affirmation Examples

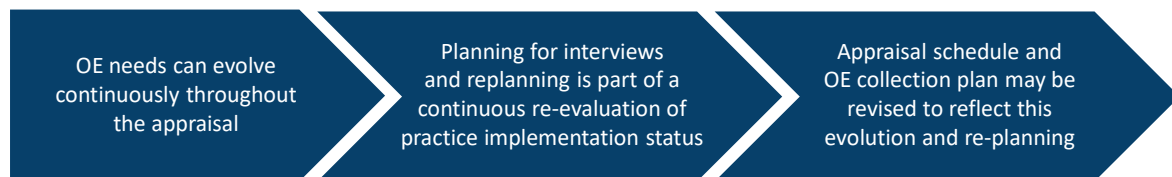

Oral affirmation examples:
Interview responses, presentations, and demonstrations

Written affirmation examples:
Emails, instant messages, chat board, response to white boards, and data contained in systems or documents

Interview Purpose

Collect affirmation OE to support appraisal data needs by conducting a series of interviews with appraisal participants:

Two Basic Types of Interviews

Standard

- Scheduled well in advance
- Uses a series of scripted questions
- Interviewees typically include people from similar responsibilities, e.g., QA personnel
- Typically, the entire appraisal team or mini-team is present

On-call or Follow-up

- Scheduled well in advance, but only held if ATMs decide there is a need
- Interviewees reserve a block of time for potential interview
- Interviewees notified the day before schedule time as to whether interview will be held
- Conducted by ATMs at an interviewee's desk, cubicle, office, or virtually if designated under virtual conditions in Appraisal Plan

Interview Confidentiality

Strict confidentiality is observed throughout all interviews.

- Includes non-attribution of OE projects and individuals
 - Project-specific reports are specified as an appraisal output
 - If specified, this must be made clear to all participants in the appraisal
- Applies to ATMs and interviewees
- Applies both during and after the appraisal

Interview Roles

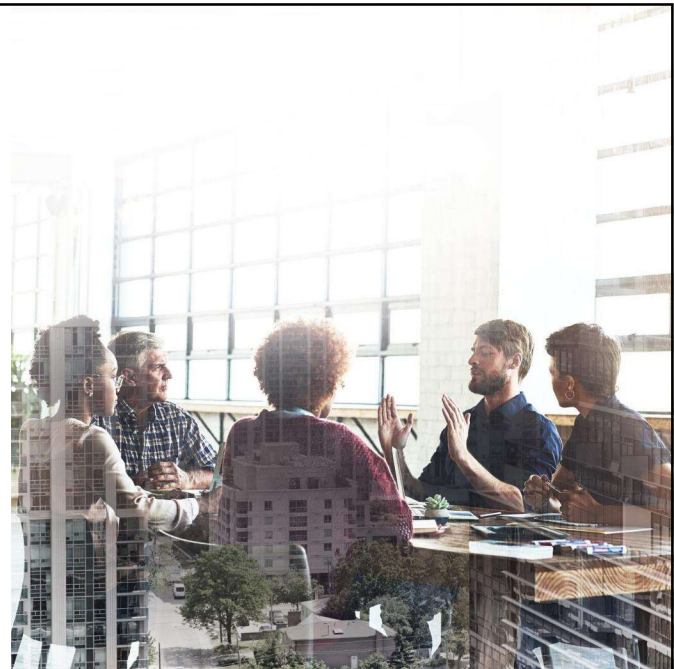

Role	Description
Facilitator	Conducts interview session and must have extremely good knowledge of the reference model to recognize links or threads in conversation and be able to follow them
Timekeeper	Tracks time against the planned session to avoid overruns
Librarian	Records requests for artifacts, if needed
Note Takers	Takes notes recording answers to questions (applies to ALL team members)
Interviewees	Provides answers

Standard Interviews

The remainder of this module addresses standard interviews

- On-call or follow-up interviews are often conducted as standard interviews
- These interviews may seem less formal, but still have the characteristics of standard interviews, such as:
 - Introductions
 - Confidentiality and non-attribution
 - Note taking

Interview Process

Typically, all standard interviews have the **entire** appraisal team present

Any interview must have at least **two** members of the appraisal team participate as determined and assigned by the ATL

Steps to conduct an interview session

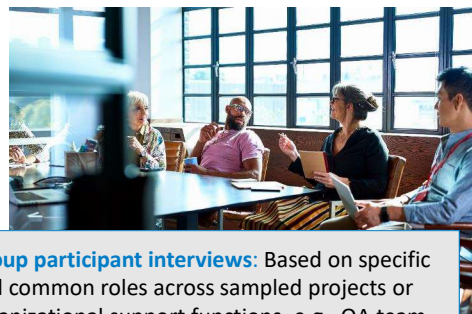

1. Prepare for the interview and assign roles
2. Remind participants of the Confidentiality and Non-Attribution agreement
3. Review interview code of conduct, including virtual considerations
4. Hold the interview
5. Record interview data
6. Tag notes as appropriate for gaps, etc.
7. Remind interviewees about any relevant artifact requests and upcoming appraisal activities, e.g., preliminary findings sessions

Interview Preparation: Groupings

Appropriate groupings are defined as a part of appraisal planning. Examples of some potential groupings are below.

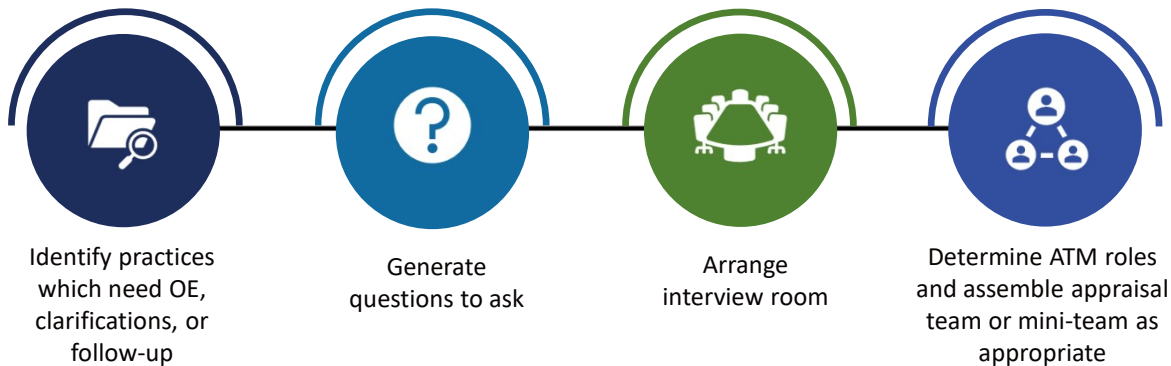

Individual participant interviews: Focused on sampled projects or organizational support functions, e.g., Project Manager, Organizational Training.

Group participant interviews: Based on specific and common roles across sampled projects or organizational support functions, e.g., QA team, CM team, process group, product engineers, product testers, requirements developers

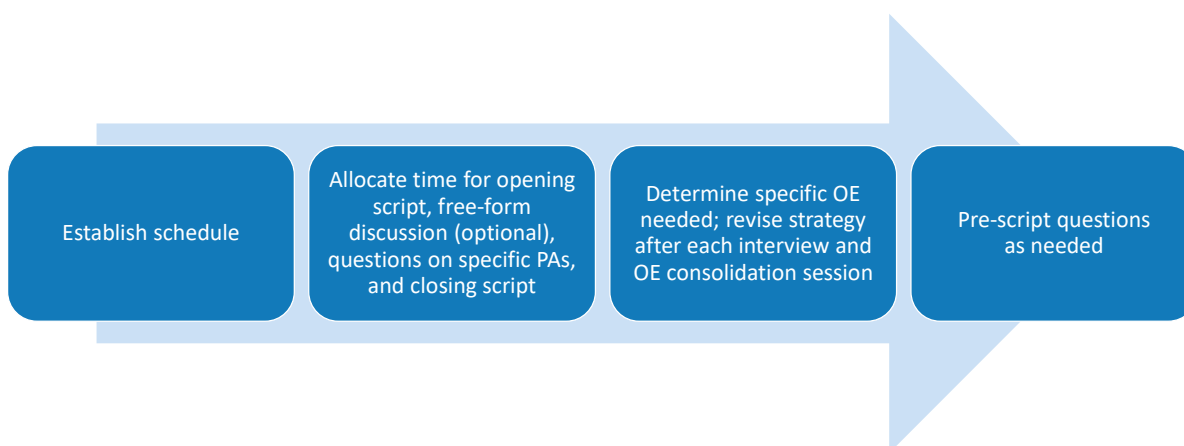

Interview Preparation

Refine the OE collection approach to determine the OE needed from interviews:

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. © 2024 ISACA.

Interview Preparation: Tasks

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. © 2024 ISACA.

Preparation Logistics

Physical settings

- Conduct interviews in private room, free from distractions
- Arrange seating in advance:
 - Interview facilitator: good eye contact with interviewee(s)
 - ATMs: Close enough to hear what is said while not distracting participants with notetaking

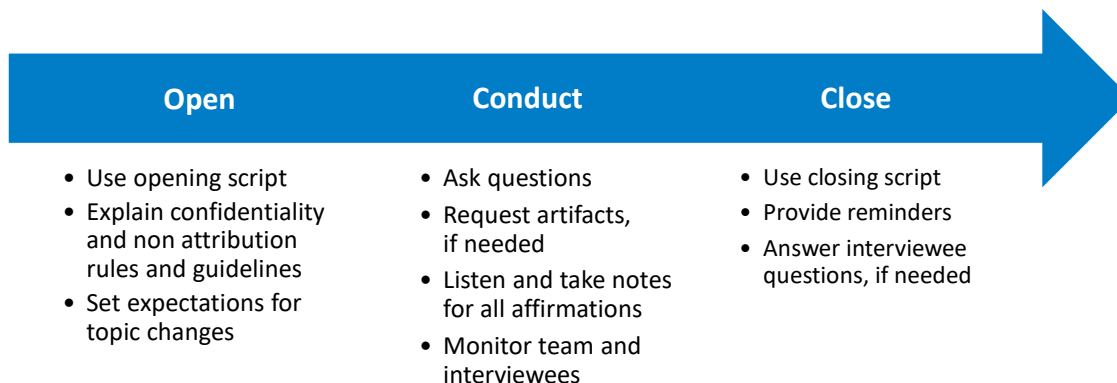

Virtual settings

- Platform used must include videoconferencing
- Verify participants can access platform
- Test connectivity and audio/video quality prior to interview
- Participants must use camera during entire interview:
 - Disable virtual backgrounds
 - Turn camera around the physical location to confirm confidentiality and non-attribution is maintained

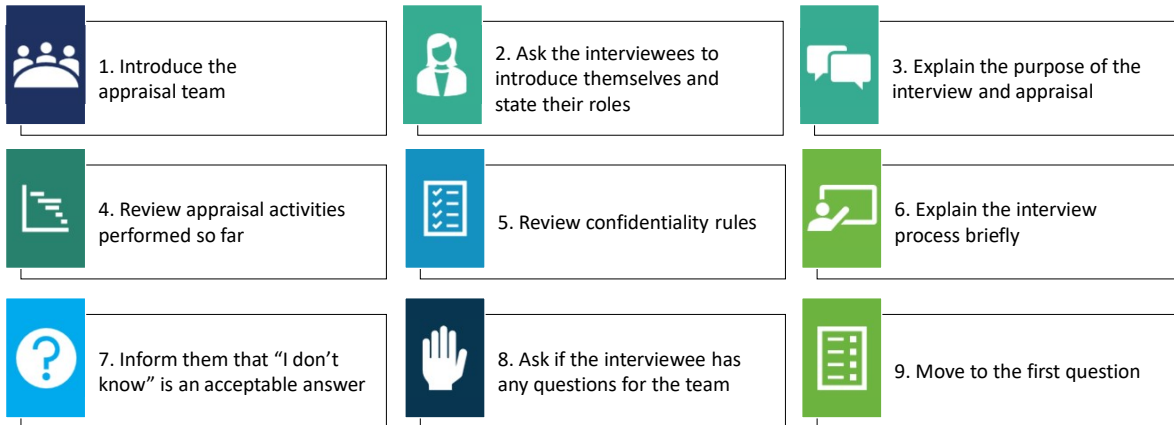

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Standard Interview Procedure

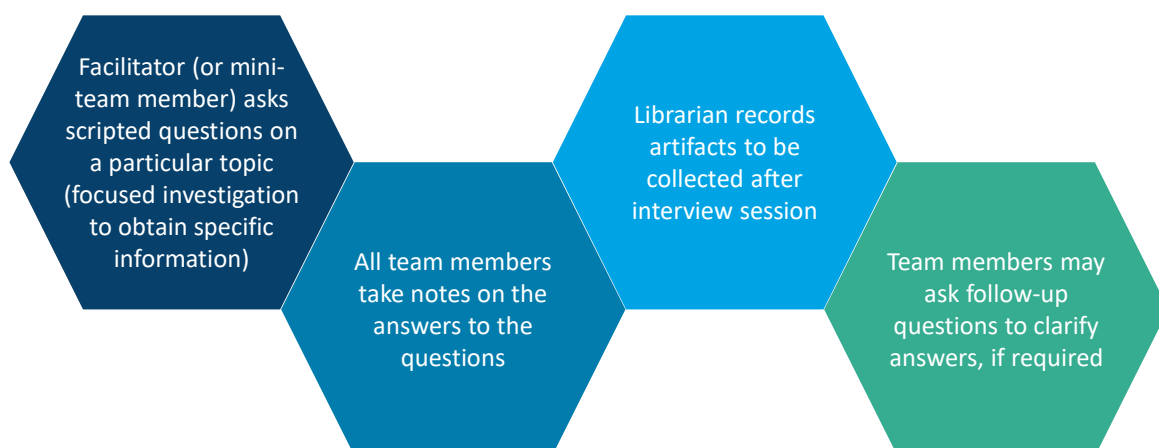

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Conducting Standard Interviews: Opening Script and Checklist

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

During the Interview: Data Collection

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Facilitator's Role During Interview

Keeps interview focused

- Collecting appropriate data and OE

Manages tangents

- Tangents often provide a source of information
- These need to be managed to stay focused

Sets expectations

- Topic changes

Manages team and interviewees

- Makes interviewees as comfortable as possible
- Helps the notetakers to keep track of the flow and capture as much as possible

Question Categories

Open-ended Questions

- Do not pre-suppose an answer
- Provide the opportunity for the interviewees to express their ideas and concerns
- Allow for a spontaneous, unstructured response

Example: "Please describe your role and responsibilities."

Direct Questions

- May presuppose the answer or assume something already exists
- Ask the interviewee to provide specific information

Example: "Please tell us about the criteria you use to perform your PQA process evaluations."

Transition Questions

- Questions about questions
- Used to guide and progress the interview process

Examples: "Did we miss anything? Did you expect us to ask about anything else?"

Open Ended: Generic Questions

Where “it” is a specific reference to the process work product or task:

How do you
_____ it?

- Plan
- Monitor and control
- Make changes to

How does it get
_____ ?

- Evaluated
- Reviewed by management
- Technically reviewed or tested

What are its
_____ ?

- Inputs and outputs
- Impacts and dependencies
- Steps that are necessary to perform

Team Interview: Best Practices

Avoid leading questions which can suggest a wanted or expected answer

ATMs must NOT respond to questions, unless they are an interviewee

Do not react to answers or statements given by participants

Listen to what each participant says and take notes on everything

Do not repeat questions that were already asked

Follow up on any information that needs clarification

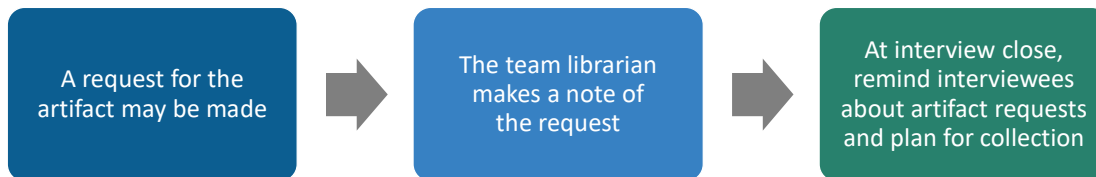

Manage tangents and keep the discussion on topic

Do not suggest answers if participants have difficulty with questions

Conducting Interviews

Requests for Artifacts

Interviewees may mention an artifact not yet seen by the appraisal team.

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Conducting Interviews

Timekeeping

The ATM assigned to be timekeeper:

- Monitors interview progress by subject
- Communicates the status to the facilitator:
 - Written notes on a timekeeping sheet
 - Predefined signals, e.g., flash cards with pre-determined timing milestones
- Sits where they can be seen by facilitator:
 - Next to or across from the facilitator

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Close the Interview

1. Ask transition questions:

- Did we miss anything?
- Was there something you expected us to ask you that we missed?

2. Ask summary questions:

- If you could change anything, other than your boss or paycheck, what would it be?
- What has improved the most over the last year?

3. Review requests for information:

- List of additional artifacts requested during the interview session

4. Provide reminders:

- Preliminary and Final Findings schedule
- Confidentiality and non-attribution rules of the interview

Individual Participant vs. Group Participant Interviews

Group participant interviews have unique aspects to consider. Group management is necessary.

Prevent outgoing participants from dominating the conversation

Encourage shy participants to contribute

Ensure all participants have an opportunity to answer and provide information

Keep the discussion on track

Transition discussion topics when sufficient evidence has been provided

Interviews Using Virtual Methods

Best Practices

Virtual methods must include videoconferencing to physically see each participant

Whenever possible, co-locate ATMs with interviewees

Verify with OUC that all participants can access the virtual platform, e.g., load software in advance of the interview

Test any technology in advance of the interview, including connectivity and audio/video quality

Always have a backup plan ready and tested before the interview begins

Verify a private environment for participants

Verify that no additional individuals other than planned interviewees are present

Clarify roles of ATMs and participants

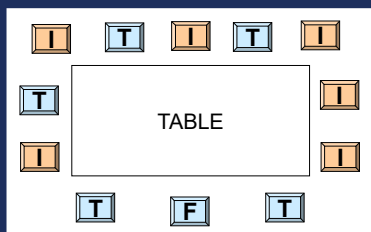

Follow scripts and protocols for listening and note tagging throughout interview

Pause in discussions and with questions to avoid talking over interviewees

Note Taking

Purpose and Objectives

Record OE gathered from interviews

- ☒ Remember what was heard and seen
- ☒ Make sense out of information
- ☒ Report information accurately
- ☒ Verify model and organizational coverage
- ☒ Resolve inconsistencies in individual team member recall
- ☒ Provide basis for generating implementation gaps (or strengths)

Note Taking Skills

Taking effective and useable notes requires good listening and keen observation skills.

Record:

- Actual relevant statements
- Source of the statements
- Verbal and nonverbal communication

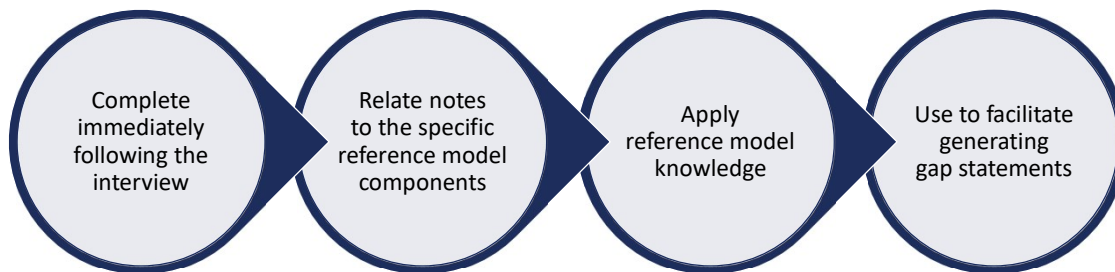

Avoid paraphrasing:

- Record what you heard verbatim, where possible (not a complete transcript)
- Avoid making conclusions and inferences

Notes taken must be able to be understood and used by the entire team.
Ensure you are clear and precise in your notes!

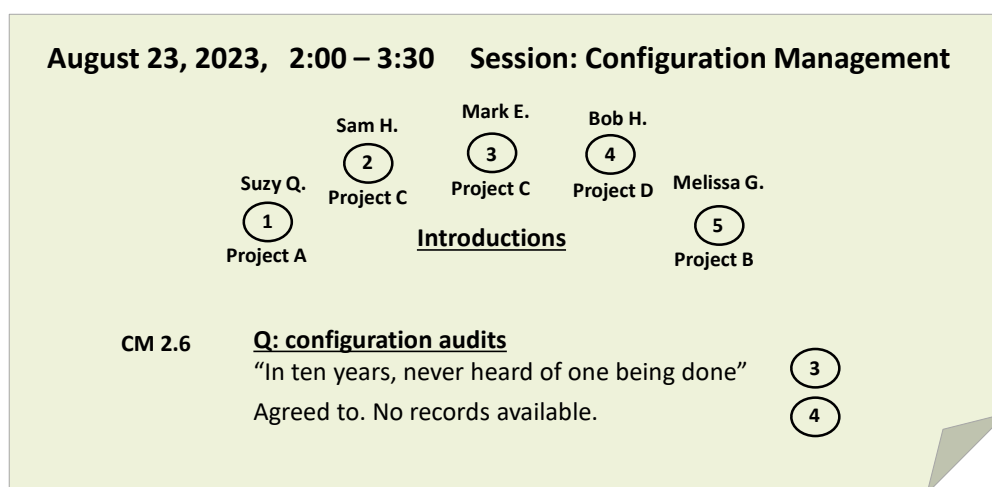

Note Tagging

Map or tag interview notes and affirmations to model practices:

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Example: Note Tagging

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

On-call and Follow-up Interviews

When are these interviews held?

- When there are holes or gaps in coverage
- To resolve inconsistencies

Objectives:

- Identify areas for improvement
- Include critical players
- Understand how work is performed (get specifics)
- Clarify previous information
- Ensure coverage of PAs

Follow-up Interview Conduct

May be less formal:

- Demonstrate process or tool
- View online information
- Speak with a manager or practitioner who was inadvertently missed

May be conducted by:

- Part of the team (at least two ATMs)
 - Interviewers perform facilitator tasks
- Entire appraisal team
 - If key information will be discussed

Activity 4: Interviews and Note Taking

Appraisal Team Member Preparation Guide

In Small Groups

Prepare for the interview:

1. Assign interview roles
2. Establish interview schedule
3. Arrange room
4. Review and script questions developed in previous exercise
5. Establish your approach to conducting the interview
6. Conduct interview

Individually

After interview:

1. Tag notes
2. Record Affirmations in practice characterization worksheet

As a group

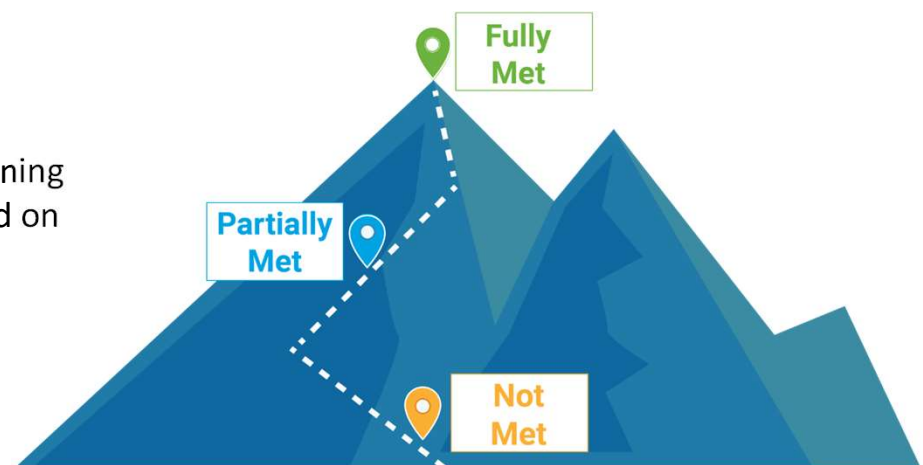

1. Debrief exercise

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Assess Your Progress

Learner Objective(s): 13, 14, 15

Note how your learning is progressing based on Learner Objectives addressed so far

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 6

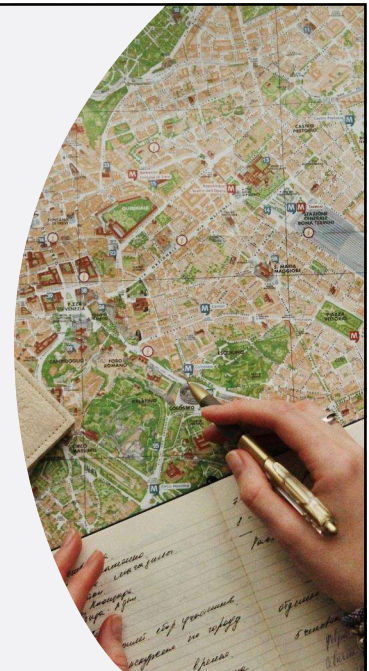

Recording and Validating Findings

Learner Objectives: 16, 17

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 6 Topics

- Writing findings
- Validating preliminary findings
- Completing the validation task

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Findings Statements

Communications to the OU regarding strengths or weaknesses related to their implemented processes

Findings must be clear and usable as the basis for future improvement efforts:

- Wording should be succinct, unambiguous, and traceable to model practices
- Avoid absolutes in wording
- Ensure that the findings are written to support confidentiality

Group common themes as global findings:

- Ensure global findings are tied to a practice or set of practices

Types of Appraisal Findings (1 of 2)

Strengths: A type of preliminary or Final Finding, which is an exemplary or noteworthy implementation of a process that meets the intent and value of a CMMI model practice.

Weaknesses: A type of preliminary or Final Finding, which is an ineffective, or lack of, implementation of one or more processes that meet the intent and value of a practice based on verified OE, and applicable across the project(s) and Organizational Support Functions (OSFs) or OU as a whole. This is realized either by:

- a) the process itself does not address a CMMI practice requirement, or
- b) the project(s) or OSFs are not following their process that meets the intent and value of the applicable CMMI practice.

Improvement Opportunity: A type of preliminary or Final Finding about a particular process that meets the intent and value of a model practice but represents an opportunity where the process could be improved to provide more value.

Improvement in Progress: A type of preliminary or Final Finding statement that is a reflection of the current state of a Practice Area or practice which is newly implemented for the project(s) or OU and shows promise of helping to achieve further improvement. Due to the recent nature of that process implementation, artifacts may be limited.

Types of Appraisal Findings (2 of 2)

Notes: Additional explanatory information regarding weaknesses or strengths, e.g., examples, supporting indicators, and consequences of weaknesses; Notes must NOT be used as a category in lieu of weaknesses.

For Evaluation Appraisals, if the appraisal team uses any other finding categories, in lieu of or beyond the ones reflected above, those categories must be defined in the preliminary and Final Findings briefing for context.

Recommendations should not be included in the preliminary or Final Findings since they could be misinterpreted by the OU as requirements. Recommendations, if identified as a tailoring deliverable for the appraisal, must be delivered to the OU as a separate artifact, or separate section of the Final Findings, e.g., Recommendations Report.

When to Write Findings

Record finding as soon as ATMs feel there is enough data to describe the strength or a weakness.

Findings must be:

Updated as work progresses

Drafted, reviewed, and agreed upon by the appraisal team for preliminary results review

Finalized and agreed upon by the appraisal team to present final results

Sources of Findings

Observations and notes taken from artifact review and affirmation sessions

Information needed or requests for information notes that are still outstanding

- Does the lack of information impact satisfaction of the practice?

Controversial issues, or issues where the team may have difficulty reaching consensus

- Follow-up interviews can be conducted
- These can be used for verification during preliminary results

Writing Finding Statements

Findings statements should provide actionable information.

Use succinct and unambiguous wording

Traceable to PAs

Avoid absolutes, e.g., “all projects...”, “no projects...”

Ensure that the findings are written to support non-attribution

Group common themes as global findings for the Final Findings presentation

Example Findings: Global Weaknesses

- Management review of development activities other than project resource and schedule tracking is not performed
- Recorded organizational policies providing guidance for most processes do not exist
- There is a lack of training provided to developers for parts of the development process

Grouping Closing Questions (Optional)

Slides recording the closing questions may be generated with the responses grouped by categories of answers:

What has improved the most over the last year?

- Category, e.g., Processes, Management . . .

What would you like to see improved?

- Category, e.g., Processes, Management . . .

Findings related to these questions are grouped as non-model findings:

- They do not impact the appraisal outcome, but sometimes may cause the team to do more investigation
- They represent input from the OU to leadership, ideas for future improvement efforts

Activity 5: Writing Findings

Appraisal Team Member Preparation Guide

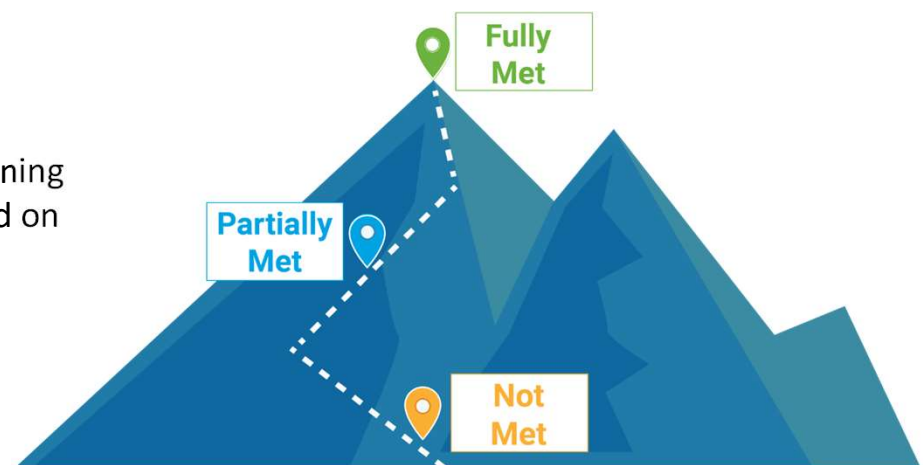

In Small Groups

1. Review the description of the issues.
2. Craft findings statements for each assigned practice
3. Record findings
4. Present findings to the class

Assess Your Progress

Learner Objective(s): 16, 17

Note how your learning is progressing based on Learner Objectives addressed so far

Module 7

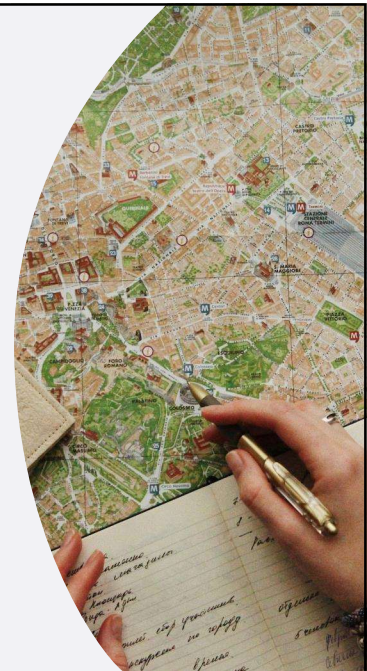

Characterization

Learner Objective: 18

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

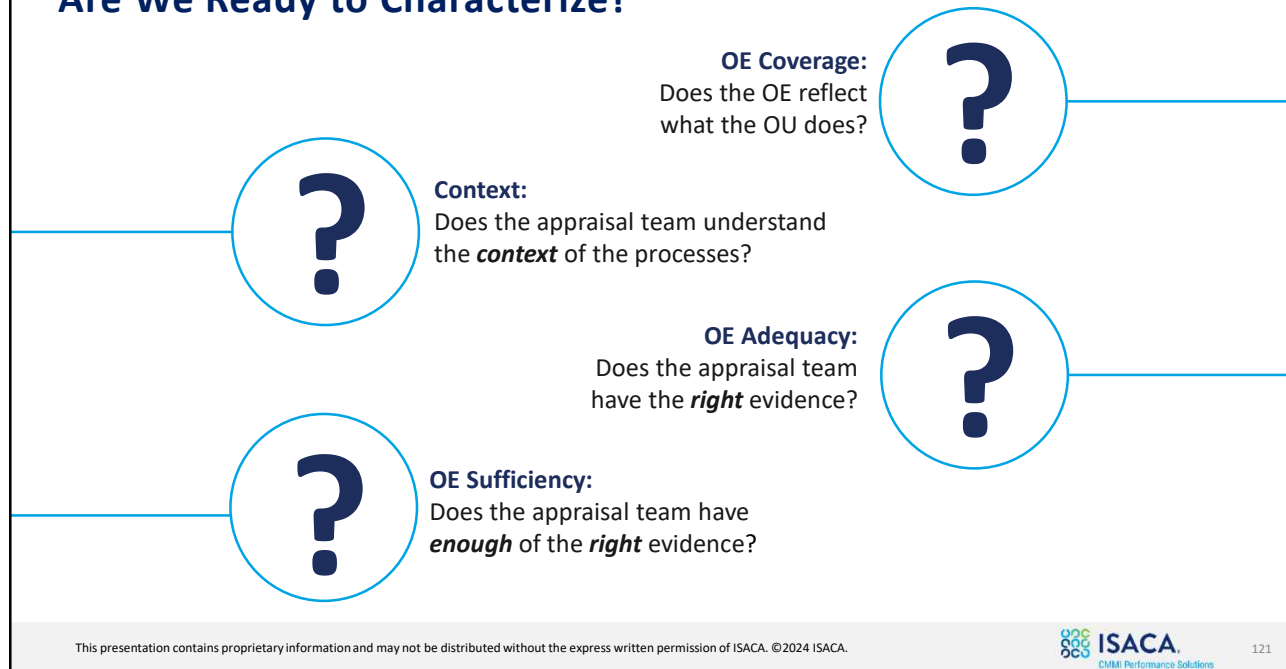

Module 7 Topics

- Readiness for practice characterization: Adequacy, Sufficiency, Coverage, Context
- Rules for characterizing Sustaining Habit and Persistence PAs
- Project and organizational support function level characterization
- OU level characterization

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Are We Ready to Characterize?

OE Coverage

Each sampled project and organizational support function shall:

Provide both artifacts and affirmations for all practices/ practice groups in scope for the model view for each PA assigned in the organizational sample.

Address all PA Required Information:

- Practice statement
- Value statement
- Additional required information, if present

OE Coverage

In Benchmark Appraisals and Sustainment Appraisals, ensure that the OE covers **all** aspects of the sampled projects and organizational support functions:

Example: In a systems and software project, looking only at evidence relating to software engineering would not be adequate

For sampled projects and organizational support functions, all elements would need to be evaluated, e.g., software, hardware, help desk, maintenance

Verify that project and organizational support functions are fully covered and individually mapped to practices before proceeding to the OU characterization

OE Adequacy

To be considered adequate, artifacts and affirmations **must**:

Demonstrate the extent of implementing, performing, or supporting the organizational or project processes that can be mapped to one or more model practices

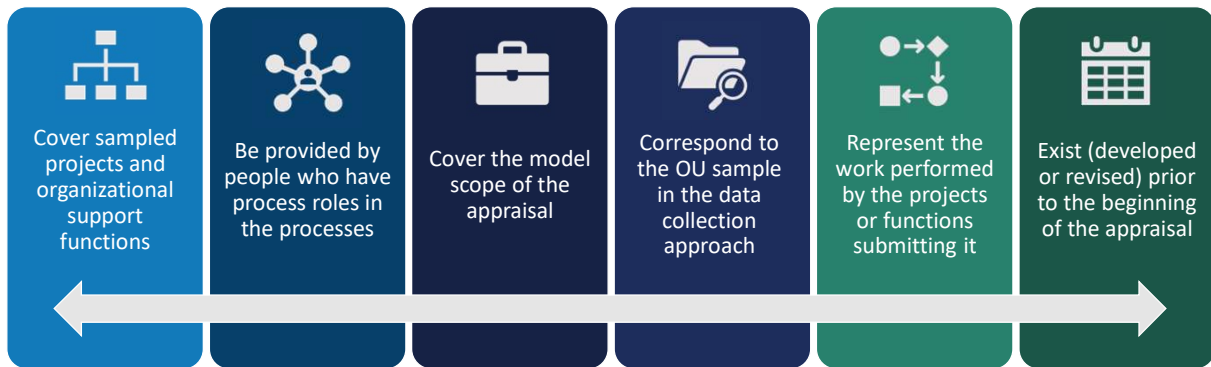

Represent processes being performed by the OU, not from outside the organization, e.g., third party contractors or providers

Be produced and provided by people who have process roles to develop, implement, participate in, or perform the processes

Note: Multiple artifacts or affirmations may be needed to support data adequacy on the processes being examined

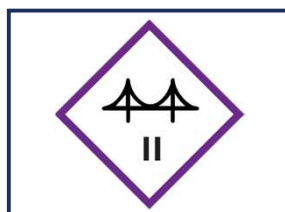

OE Sufficiency

In Benchmark Appraisals and Sustainment Appraisals, all OE must:

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Adequacy and Sufficiency: Sustaining Habit and Persistence Practice Areas (PAs)

Implementation Infrastructure (II)

Artifacts and affirmations are provided for II practices as applied to the set of processes implemented, performed, and supported within the OU

Governance (GOV)

Artifacts and affirmations are provided for GOV practices for senior management and affected stakeholders as applied to the set of processes performed within the OU

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Characterization Values

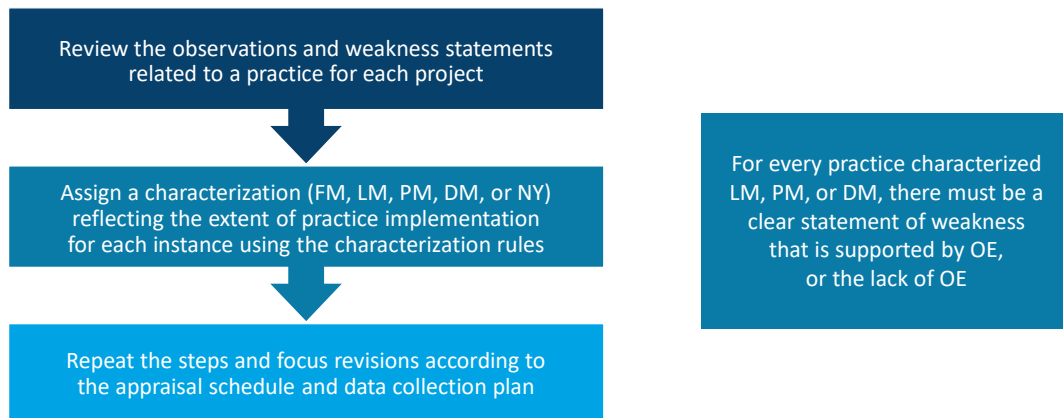

Label	Meaning
Fully Meets (FM)	Adequate OE is judged sufficient to demonstrate that the intent and value of the practice is met, and no weaknesses are identified.
Largely Meets (LM)	Adequate OE is judged sufficient to demonstrate that the intent and value of the practice is met, and one or more weaknesses are identified.
Partially Meets (PM)	Some or all OE are absent or judged to be inadequate, but other OE suggests that limited aspects of the intent and value of the practice are met, and one or more weaknesses are identified. --- OR --- Conflicts are identified in the OE, and one or more weaknesses are identified.
Does Not Meet (DM)	Some or all OE are absent or judged to be inadequate to demonstrate that the intent and value of the practice is met, and one or more weaknesses are identified.
Not Yet (NY)	The sampled project(s) and Organizational Support Functions (OSFs) have not yet executed the process and generated the subsequent OE to demonstrate the intent and value of the practice have been met. This label cannot be used to characterize a practice for a sampled project or OSF that decided not to execute a process. IT and GOV practices cannot be characterized as NY for Benchmark or Sustainment Appraisals.
Not Characterized (NC)	Indicates insufficient observed OE or the inability of the appraisal team to reach consensus to determine a characterization for the practice.

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Project Level Characterization Steps

For each assigned PA for each sampled project and organizational support function, ATMs:

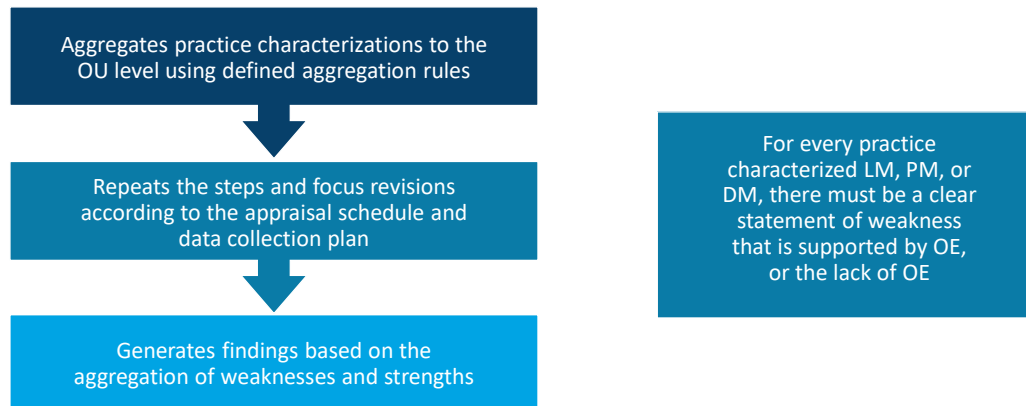

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

OU-level Characterization Steps

For each PA in the Model Scope for all sampled projects and organizational support functions, the FULL appraisal team:

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Activity 6: Characterization: Part A

Appraisal Team Member Preparation Guide

In Pairs

1. Using the form provided, review the assigned scenario
2. Evaluate evidence from the scenarios and characterize the PAs
3. Use a flip chart to record answers

As a Group

1. Present answers
2. Debrief scenarios

*Refer to **Characterization and Rating Reference** for characterization information for Benchmark, Sustainment, and Evaluation Appraisals.*

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Activity 6: Characterization: Part B

Appraisal Team Member Preparation Guide

As a Group

1. Review the organization description
2. Discuss how the Sustaining Habit and Persistence PAs are addressed by the OU
3. Refer to the Practice Characterization Reference
4. Determine the OU characterization for your assigned II and GOV practices

What is the OU Characterization?

Practice x.y:

Project ID	Practice Intent Characterization	Preliminary Findings (Statements of Gaps)
P1	DM	(W) ...
P2	PM	(W) ...
P3	FM	
P4	PM	(W) ...
OU Level	<i>[Aggregated OU Level]</i>	<i>[Preliminary findings summarizing above findings]</i>

OU Characterization Exercise

What is the OU Characterization for each of the following items?

- | | |
|---------------------|---------------------|
| 1. LM, LM, LM, LM = | 5. LM, PM, FM, FM = |
| 2. FM, LM, FM, FM = | 6. DM, FM, FM, FM = |
| 3. LM, LM, FM, LM = | 7. LM, LM, FM, NY = |
| 4. DM, LM, FM, LM = | 8. NY, NY, NY, NY = |

Activity 6: Practice Characterization: Part C

Appraisal Team Member Preparation Guide

As a Group

- Aggregate the practice intent characterization from the sampled projects and organizational support functions to the OU level for both practices
- Use the Practice Group Ratings Table and, where appropriate, justify the team judgement that led to the OU aggregation
- Identify any assumptions you may have made and any additional information you may have needed to come to your conclusion

Module 8

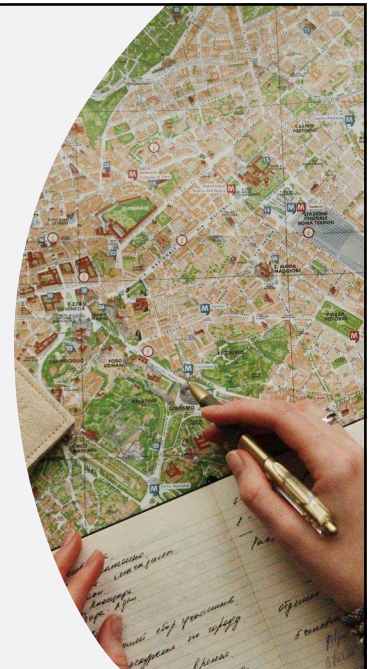

Preliminary Findings

Learner Objectives: 17, 18

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 8 Topics

- Validating preliminary findings
- Developing presentation
- Planning presentation
- Conducting presentation
- Collecting feedback
- Completing validation

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Preliminary Findings Validation: Overview

Validate preliminary findings by seeking input from appraisal participants.

The focus is on findings that have been determined to have an impact on OU-level characterizations.

The most common mechanism uses a series of structured presentations for appraisal participants.

Method:

Various mechanisms can be used if certain minimum requirements are met:

- Appraisal participants are allowed the opportunity to review and comment on accuracy of findings
- At least one representative from each sampled project and organizational support function must be present
- Non-attribution to the appraisal participants who provide input is enforced

Development Of Preliminary Findings Slides

For each PA in the model scope:

- Name of PA
- PA Intent Statement and Value Statement
- Weaknesses
- Requests for Information
 - Any additional information that is still needed
- Strengths (optional)

Items not typically included:

- Notes

Planning the Presentation

Plan the number of sessions:

- Project leaders
- Functional level personnel
- Middle managers

Avoid conflicts of interest created by management-subordinate relationships

Ensure only appraisal participants are invited to the presentation

The ATL and OUC should verify no uninvited personnel attend

Planning the Presentation

Roles for Validation Sessions

Presenter(s)

- Lead and give the briefing

Team members

- Record feedback, sitting among the participants to better see and hear reactions and comments

Librarian

- Records additional information to be provided

Mini-teams

- Provide support and clarifying information as needed

Conducting the Presentation Session

- 1 ATL starts session with an update of appraisal activities and the purpose of session
- 2 Designated briefer(s) present preliminary findings one at a time to the audience and waits for comments:
 - Read the findings verbatim; do not ad lib
 - Be straightforward and non-apologetic
 - If challenged, do not commit to change a finding; commit to carefully consider the input
- 3 ATMs not presenting take notes and record verbatim comments and body language
- 4 Encourage feedback from audience:
 - Are the findings true for their project?
 - Are findings true for the organization?
- 5 At end of session, the ATL asks audience for any other comments.
- 6 Session ends with a reminder:
 - Preliminary or Final Findings presentation time and location
 - Confidentiality and non-attribution are still in effect

After the Presentation

Process comments (and data) received by the team:

Mini-team follows up any comments that have the potential to alter:

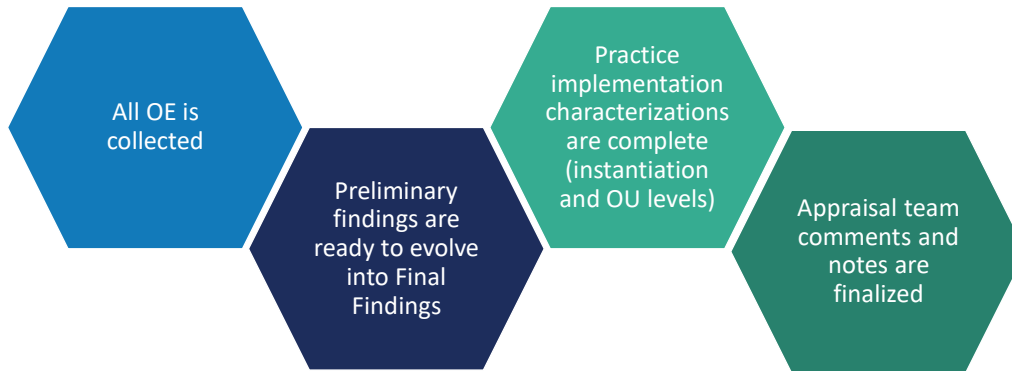

- OE collected to date
- Practice characterizations at the instantiation or OU level
- Preliminary findings

Appraisal team discusses any comments affecting the wording of preliminary findings and any item that previously had team consensus, e.g., OU characterizations

Appropriate modifications are made to OE recorded in the database of OE Team Worksheets

Completing The Validation Task

Appraisal validation results are complete when:

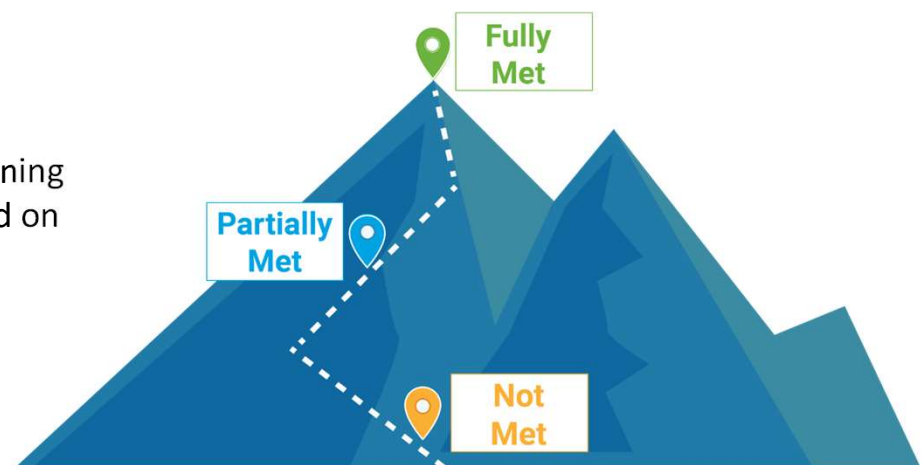

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Assess Your Progress

Learner Objective(s): 17, 18

Note how your learning is progressing based on Learner Objectives addressed so far

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 9

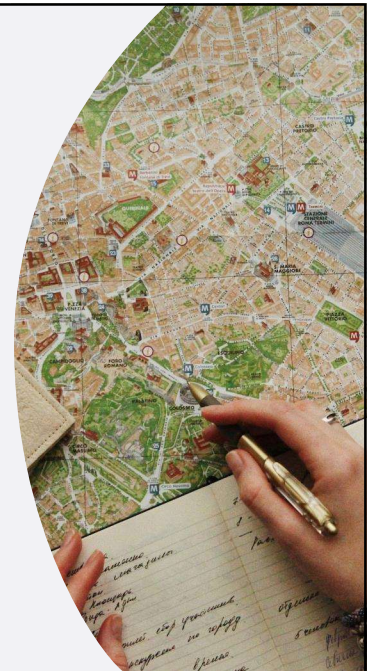

Rating

Learner Objective: 18

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

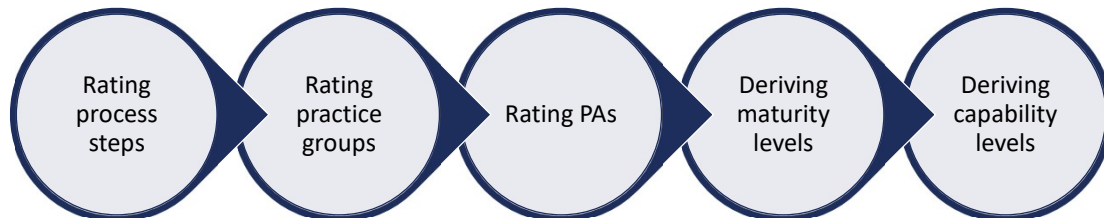

Module 8 Topics

- Rating process

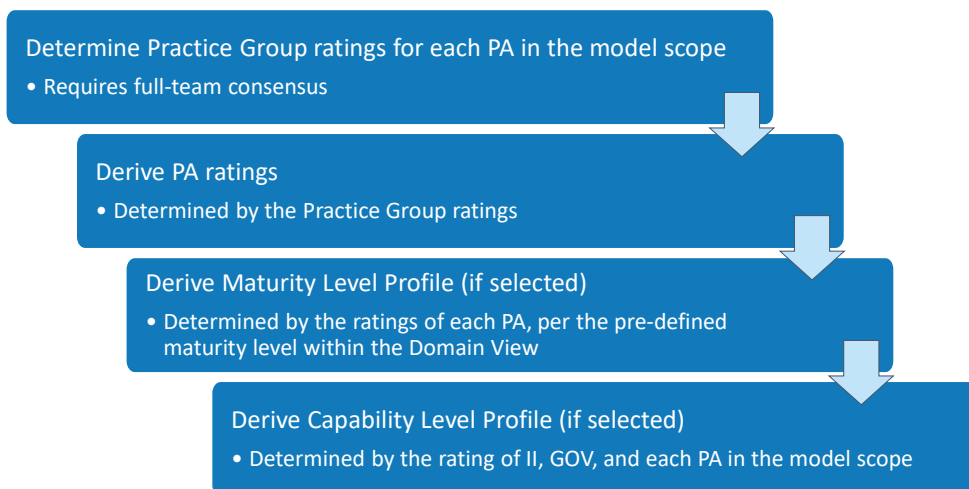

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Rating Process Concepts

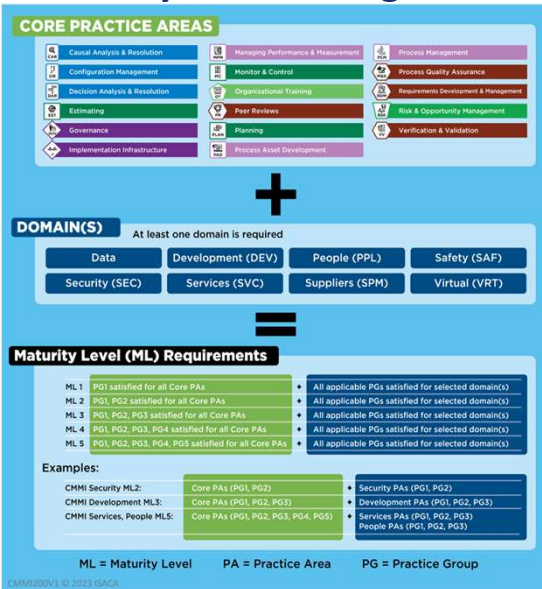

Refer to **Characterization and Rating Reference** for rating information for Benchmark and Sustainment Appraisals.

Rating Process

Maturity Level Ratings

The maturity level rating is the highest level at which all PAs (including II and GOV) contained within that maturity level for the Domain View, and all lower maturity levels are rated.

Example: For CMMI-DEV ML3, CM must be satisfied up to and including Level 2, and all PAs for ML2 and ML3, AND II and GOV must be satisfied through Level 3

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Capability Level Ratings

To achieve a target capability level rating, all practice groups (PGs) in the Practice Area (PA) must be rated at the target level.

II and GOV must also be rated up to and including that same target level:

- For example, for CM to achieve a CL3 rating:
 - CM must be rated at Level 2
 - II and GOV must be rated at Level 3

If all PAs are not rated at their target levels, the capability level determined is the lowest level at which all PAs contained within the model view are rated.

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Knowledge Check: Development

An OU is appraised against the CMMI-DEV ML3 model view

- CM is rated at Level 2
- II is rated at Level 3
- GOV is rated at Level 2
- All other PAs are rated at Level 3

What is the ML for this OU?

Knowledge Check: Services

An OU is appraised against the CMMI-SVC ML3 model view

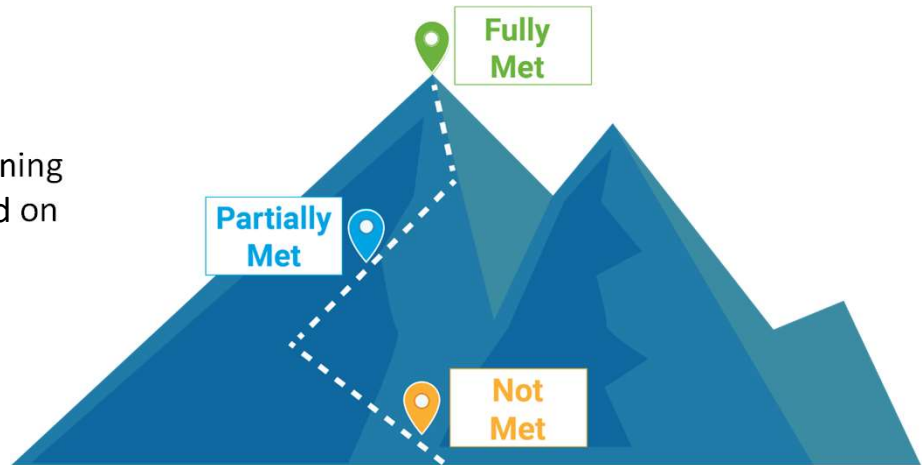

- CM is rated at Level 2
- II is rated at Level 3
- GOV is rated at Level 3
- All other PAs are rated at Level 3

What is the ML for this OU?

Assess Your Progress

Learner Objective(s): 18

Note how your learning is progressing based on Learner Objectives addressed so far

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 10

Performance Report

Learner Objective: 19

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 10 Topics

- Performance improvement
- High Maturity
- Persistence
- Performance reporting
- Walkthrough

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Emphasis On Performance Improvement

Understanding an organization's current level of performance helps to meet its current business needs and objectives.

If the performance is not meeting business needs and objectives, then process improvement can be used to raise performance to the needed level.

The need to improve performance is a key driver for process changes.

Performance and process improvements should be addressed at all levels of an organization.

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Performance, High Maturity, and Persistence

- Evolutionary practices and MPM are building blocks of improved performance:
 - Performance improvements are identified at practice group level for each PA in scope
 - Practice group levels are roadmap to improved performance, starting at practice group level 1
 - Performance improvement should not wait until higher maturity levels
- GOV and II strengthen and focus attention of organization on persistence and habit of processes that lead to improved performance.
- Performance Report validates appraisal findings by identifying tangible business results achieved from adopting CMMI.

Performance Report

Purpose and Intent

Focus the appraisal and improvement efforts not just on process, but on **business performance**.

Link tangible business performance improvements to the use of CMMI

Improve visibility of relationships among performance results, business benefits, and improvements

Leverage evolutionary practices to focus on performance early

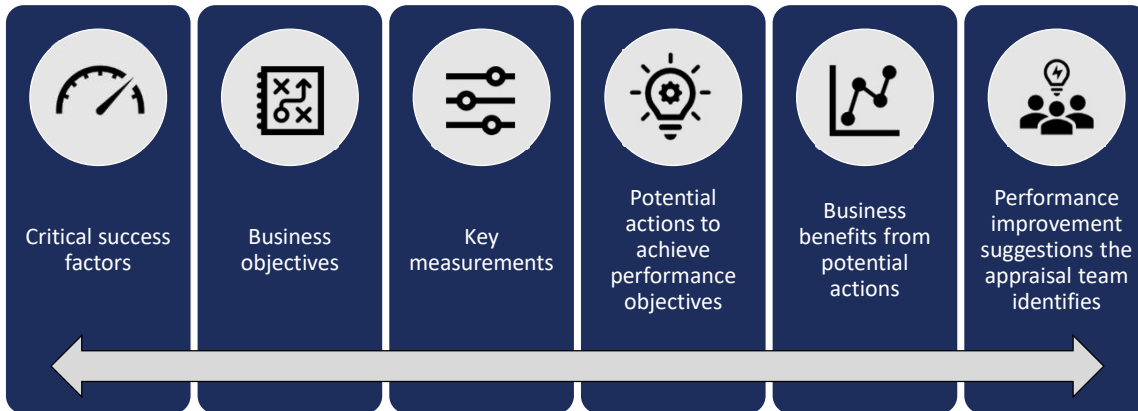

Emphasize performance throughout appraisal and improvement efforts

Align with appraisal results

Reporting Performance

Appraisal team must report on evidence related to the organization's performance, including:

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Performance Report Walkthrough

Each Benchmark Appraisal and Sustainment Appraisal must prepare a Performance Report.

Appraisal teams are required to use:

- Projects and organizational measurement plans, objectives, and results to populate the Performance Report
- Performance Report to corroborate and validate the maturity or capability levels achieved

Procedures:

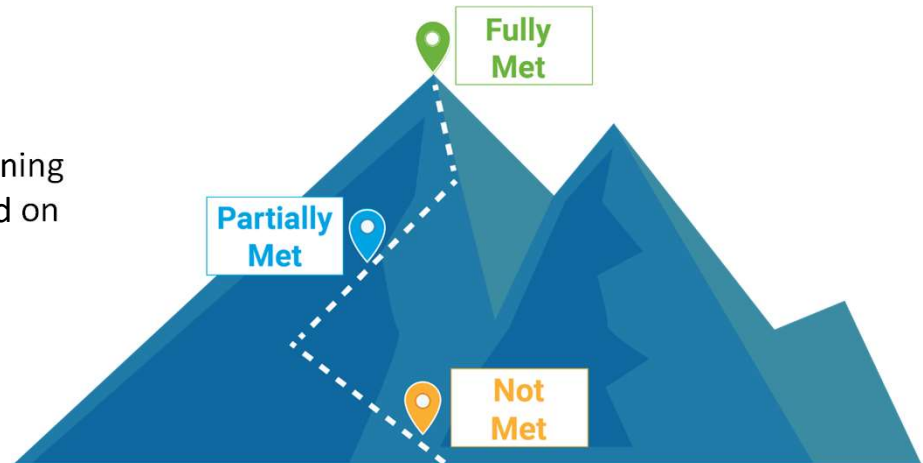

- Available from the CMMI Appraisal System (CAS)
- Information can be entered through the web interface or through a template download/upload
- Reference version of template available to CMMI Lead Appraisers within the MDD-Toolkit-Appraisal Planning and Conduct
- Time to complete, 1-2 hours

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Assess Your Progress

Module 11

Reporting Results & Wrap-Up

Learner Objectives: 17, 19

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Module 11 Topics

- Preparing the Final Findings presentation
- Conducting the Final Findings presentation
- Executive session (optional)
- Appraisal wrap-up

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Final Findings Presentation: Purpose

Report the appraisal
results to the
Appraisal Sponsor

Build further
organizational buy-in

Raise the visibility
of the planned
improvement effort

Provide an
opportunity for
demonstration of
sponsorship

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

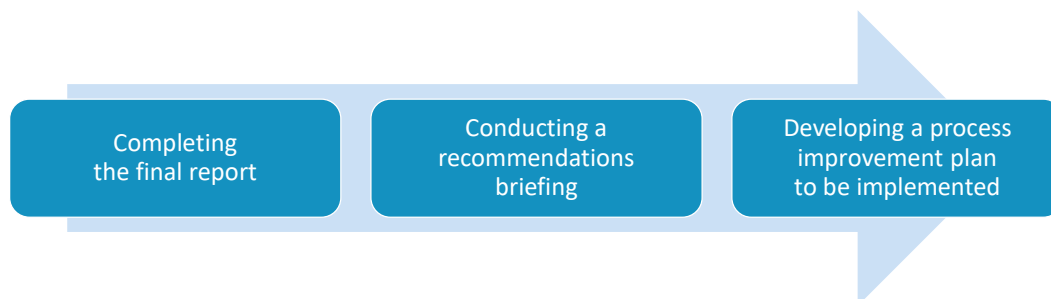

Final Findings Presentation

Appraisal Overview • Organization name • Appraisal Sponsor • Appraisal Team and Support Personnel	Objectives • Business objectives • Appraisal objectives	Appraisal Scope • Organizational Unit • Reference model • OU scope • Organizational sample	Findings • Types and definitions • PA findings • Non-model findings • Global findings
Ratings (optional) • Definitions • PA profile • PA profile chart(s)	Affirmation • Team members support findings presented	Next steps (optional) • Follow-on activities as determined by ATL and Appraisal Sponsor	Appraisal Disclosure Statement (ADS) • Optional to include within presentation

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Next Steps

Indicate what will happen next, with possible options that include:

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Team Signature Page

I support the findings in this presentation and affirm that to the best of my knowledge it represents an accurate portrayal of the state of the process in the appraised organization.

Team Role	Name (printed/typed)	Signature	Date

Conducting the Final Findings Presentation

Team roles:

- ATL usually conducts
- Team members support as required

Present:

- Comments on the general background and conduct of the appraisal
- The PA findings one at a time
- Non-model findings
- The PA profile (and ratings)
- Closing remarks

Appraisal Disclosure Statement (ADS)

Generated by CAS and prepared by the ATL

Provided to the Appraisal Sponsor at the conclusion of the appraisal

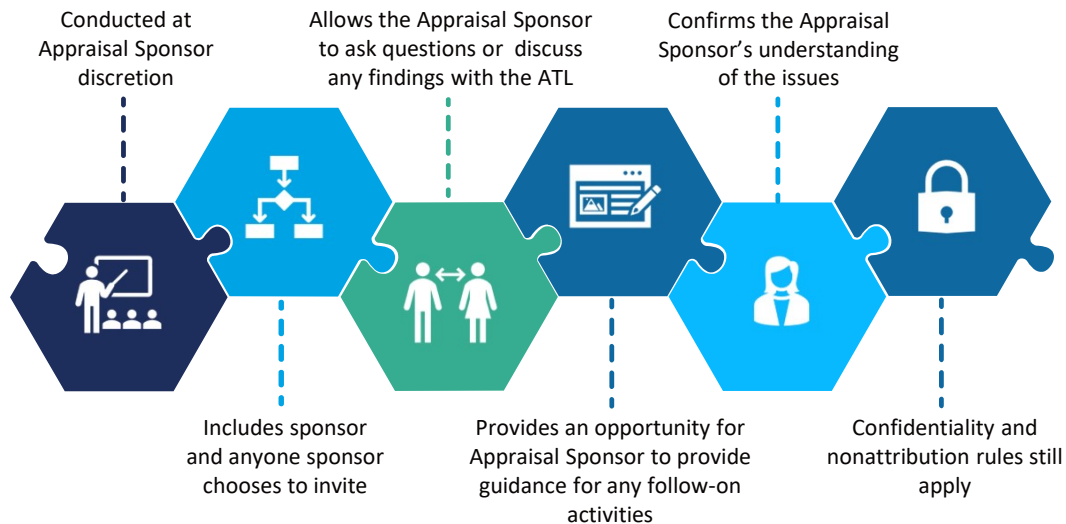

Summarizes the appraisal results and conditions under which the appraisal was performed

Contains essential information to adequately interpret the meaning of assigned maturity and/or capability level rating

ADS Contents

- Name and organizational affiliation of Appraisal Sponsor, ATL, and ATMs
- Identification of OU, including any projects or support functions specifically excluded
- Identification of organizational scope, including all sampled projects and organizational support functions
- Organizational sample size
- Critical factors that influence implementation of practices
- Reference model and appraisal method used
- Itemization of PAs rated, and those not rated
- Maturity level and/or capability level ratings assigned
- Dates of appraisal activities and appraisal expiration date
- ATL affirms that:
 - Information in ADS is accurate
 - All MDD requirements are met
 - Organizational scope is representative of OU
- Appraisal Sponsor affirms:
 - Appraisal Scope is representative of the OU
 - Information in the ADS is accurate and that ISACA may review the appraisal results package and/or conduct interviews deemed necessary upon request
- Appraisal Sponsor also agrees to maintain the appraisal record through the appraisal expiration date

The Executive Session (Optional): Purpose

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

The Executive Session (Optional): Conduct

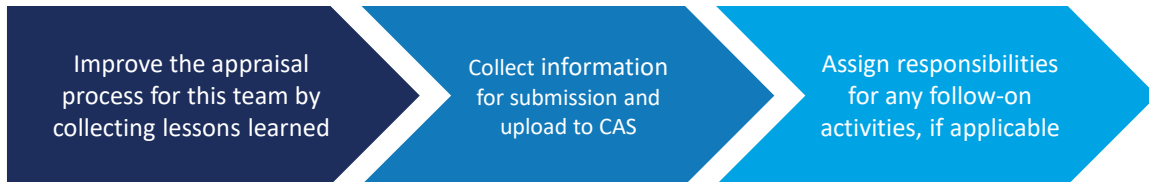

ATMs may be included in this meeting.

If included, they should be:

- Ready to answer questions
- Ready to help set the stage for process improvement

This presentation contains proprietary information and may not be distributed without the express written permission of ISACA. ©2024 ISACA.

Appraisal Wrap-up: Purpose

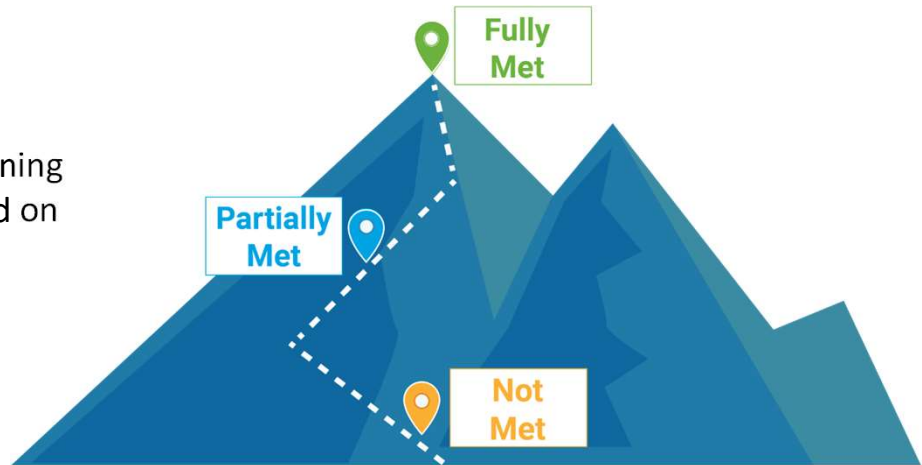

Appraisal Wrap-up: Conduct

1. ATL gathers lessons learned from the appraisal team
What went right, wrong, and ideas for improvements in the appraisal process
2. ATL completes reporting requirements in CAS
3. Appraisal Sponsor and ATMs complete online feedback forms
4. Assignments are made for the follow-on work (optional)
e.g., Final Findings report generation (optional)
5. Appraisal artifacts and data are archived or disposed of as recorded in the appraisal plan

Assess Your Progress

Learner Objective(s): 17, 19

Note how your learning is progressing based on Learner Objectives addressed so far
